INNOVATIONS 2016

Added value thanks to innovative components and systems

It's electric.

**BACH
MANN**

BACHMANN International. Build on the best connections.

BACHMANN makes connections. So power and data are available right where you need them. For industrial, commercial and home applications, in offices and training rooms, on desks and on conference tables. BACHMANN Facility and IT systems are flexible enough that you can modify them at any time to suit future power or data management needs. And with BACHMANN's up-to-the-minute range of electrical materials, you can be sure of satisfying even your customers' more unusual electrical and electronics requirements.

One of our company's primary objectives is to deliver innovative products to help our customers achieve long-term success. For this reason, we exploit all the possibilities offered by professional engineering and modern process management to develop our standardised and customised systems and products.

Consider, for example, energy management optimisation and the efficient use of energy. Day after day, our technical specialists help you access new ways of improving energy efficiency with the aid of intelligent new products. Discuss your projects with us if you would like to improve your connections. We will be there from the initial in-depth consultation, supply you with components and modules ready for installation and assist you in planning and developing your specific solutions. And we will use every opportunity to exceed your expectations of us and our systems. We look forward to making the best connections for you – and with you!

Quality at all levels

Do not be satisfied until you have the optimum solution. A philosophy that applies at every level of our company and that is consistently demonstrated by all our employees.

The result: products to match the best on the world's markets, outside and inside. This is also evident from our certification to DIN EN ISO 9001:2008

CONTENTS

IT POWER SOLUTIONS

Distribution systems offering efficient energy management for modern IT solutions. Everything from power for control cabinets to high-quality built-in electronic components.

FACILITY SOLUTIONS

Elegant, practical solutions for energy and data connections in office, training and conference rooms. Flexible, modular systems for all supply and communications needs.

INSTALLATION

Our extensive range of electrical and electronics products. Everything the technician requires, and always the state of the art – trusted components, high-quality products.

KITCHEN SOLUTIONS

The best connectors and connections in the kitchen. Our systems are configurable with numerous standard international socket outlets and, if necessary, with data connections too.

IT PDU Basic 1 U

Power distribution units, 230 V/50 Hz

With its IT-PDU 1 U, BACHMANN provides a huge choice of PDUs in a high-quality aluminium profile. With their extremely compact size of just 1 height unit, 44 mm in depth and 19" in width, the PDUs can be easily integrated in your IT rack.

Their multi-functional mounting brackets allow the units to be easily mounted in various ways (e.g. inwardly recessed). Our high quality standards ensure that the contact is reliable.

The benefits at a glance

- Torsionally rigid 1 U aluminium profile, 19" format
- Up to 9 socket inserts in the 19" format
- Flexible positioning and universal attachment options
- The modular platform allows individual solutions to be project-planned

Versions available:

- Anodised profiles in black or grey
- End caps riveted or rewireable
- Earthing contact and IEC 320 socket outlets
- Various country versions
- Illuminated 2-pole switch
- Interlocking of IEC 320 plugs

Article number	Cable type H05VV-F	Cable length (m)	Plug	Phases	Rated voltage (V)	Current per phase in A	Fuse	C13	C19	SOEC*	Outlets in total	Dimensions (WxHxD) in mm

IEC 320 C13 lockable

(12 x locking clips included)

Two locking clips to secure two power cables. Optimum interlocking only provided with BACHMANN connecting cables.

*SOEC = Socket outlet with earthing contact

IT PDU Basic 1 U Vertical

Power distribution units 230-400 V/16-32 A/3.6-22 kW/50 Hz

For future-proofed, highly efficient energy distribution in the data centre, server rack and network rack.

The high-quality and very robust aluminium profile measures a compact 44 x 47 mm. The space-saving design therefore provides space for data cabling and ventilation for cooling the server rack.

IEC 320 C19 with IEC Lock

The IEC Lock system protects computers, as servers and electrical equipment can become accidentally disconnected due to vibrations.

IEC 320 C13 lockable

Two locking clips to secure two power cables. IEC 320 C13 with IEC Lock can be supplied.

The benefits at a glance

- Space-saving integration of PDU in the server rack with scope for modular add-ons
- High-quality and very robust aluminium profile
- Extremely compact dimensions of 44 x 47 mm, which therefore provides plenty of space for data cabling and ventilation for cooling the server rack
- Plugs locked using PVC clip or IEC Lock
- Phases identified by colour
- PDU with single or double infeed to increase performance or map redundancies, up to 96 A per PDU
- Customised and country-specific series-quality solutions available on request

Locking clips

940.103 · Red locking clip for IEC320 non-heating appliance sockets C13, supplied in packs of 12.

IEC 320 and earthing contact plug connecting cables available in grey/black to distinguish from power supply (A/B) and in short cable lengths from 0.5 m.

BlueNet

The intelligent, modular
energy management system

BlueNet
Efficient Power Management

BlueNet offers a complete solution for structuring, controlling and monitoring IT power networks. It captures consumption and output data and provides the user with relevant data and control options for modern energy management.

Energy management

Monitor energy costs with BlueNet. All data, such as current, voltage, power, are depicted by the software and display. Loads can then be distributed so that failures due to circuit overloads no longer occur.

Messages can be triggered automatically by means of adjustable threshold values.

Restarts controlled by web link further increase availability and flexibility.

The BlueNet technology can be easily integrated into superordinate infrastructure software solutions using extensive, integrated interfaces.

Safety

Every BACHMANN PDU is tested and documented during production one port at a time using a computer-based test program. Electronic components are continually subjected to "stress tests" to guarantee consistent quality.

BlueNet is only integrated in compact, very robust, yet weight-optimised aluminium housings. Most of the requirements in relevant standards and guidelines are exceeded.

Energy efficiency

BACHMANN BlueNet PDUs save energy. The technology used has some of the lowest operating consumption levels for intelligent measurement systems in the world.

The modular structure of the BlueNet PDUs guarantees maximum packing density. The tiny amount of space needed by the PDUs leaves room for cabling and air conditioning in the rack. The BlueNet series is one of the most compact power metering solutions with integrated network and sensor interface anywhere in the world.

BlueNet BN0500

Current and power metering via local display

The benefits at a glance

- Current measurement
- Voltage measurement
- Phase angle measurement
- Effective power measurement taking phase angle into account
- Frequency measurement
- BlueNet display

Integrated measurement of:

- Current, effective power, voltage, frequency, phase angle and energy
- Indication on illuminated LCD
- Energy meter which can be reset (value is stored even if there is no power supply)
- Measurement accuracy +/- 2%
- End caps riveted and do not open
- Includes mounting brackets and screws
- Plastic black, aluminium profile silver

BlueNet BN1000

The complete solution for small and mid-sized IT network applications

The BlueNet BN1000 technology offers comprehensive power metering to monitor your IT infrastructure. Additional temperature measurement using an external temperature sensor allows the ambient temperature to be determined. Measured values are provided via the web interface and via SNMPv2c. The integrated seven-segment display is used to display measured values and the IP address on the PDU. The BlueNet Wi-Fi app is available for conveniently displaying collected data on mobile devices. An e-mail alarm feature for individually configurable load, amperage and temperature threshold values offers additional administrative safety. Along with an Ethernet port, BN1000 products are also equipped with an RP-SMA antenna connection. You simply choose your preferred connection type, whether Ethernet or Wi-Fi.

The benefits at a glance

- Three measuring groups of 16 A each
- Measurement of ambient temperature and electrical values
- Load management and cost control
- Management via web interface, SNMPv2c and smartphone app
- Lean user management
- Wi-Fi and Ethernet connectivity (parallel operation possible)
- SSL-encrypted e-mail alarm feature
- Integrated seven-segment display

MODULARITY

On request, all BlueNet BN1500 products are also available with RCDs, RC circuit breakers, miniature circuit breakers, complete device protection or, for example, a thermal fuse.

MEASURING + SWITCHING

3 switching groups of 16 A each, can be switched manually or automatically depending on load, temperature and time. Optional permanent socket outlets.

ALARM FUNCTION

Reports e-mailed when values exceed or fall below electrical work, power or temperature. Measurement data available as .csv file.

DISPLAY

Integrated seven-segment display for the display of measured values and IP address.

WI-FI ANTENNA

The BlueNet BN1500 module is available with an internal or external antenna.

COMMUNICATION

Ethernet interface as well as Wi-Fi connectivity (802.11 b/g/n) and DDNS support.

BLUENET BN1500 MODULE

Power metering, temperature measurement, switchable socket outlets, web interface, mobile app for Android and iOS.

BlueNet BN1500

The complete solution for small and mid-sized IT network applications

BlueNet
Efficient Power Management

The BlueNet BN1500 combines the range of functions of BN1000 technology with the option of connecting or switching off the three groups in one compact overall concept. Switching can be performed both manually and automatically using load, amperage, temperature or time thresholds which can be set individually. In this case, the maximum switching power is a full 16 A per switching group – optionally also with 3 phases in 400 V operation. The integrated seven-segment display is used to display measured values and the IP address.

The benefits at a glance

- Three measuring and switching groups of 16 A each
- Measurement of ambient temperature and electrical values.
- Load management and cost control
- Management via web interface, SNMPv2c and smartphone app
- Lean user management
- Wi-Fi and Ethernet connectivity (parallel operation possible)
- SSL-encrypted e-mail alarm feature
- Integrated seven-segment display

Sensors

BlueNet BN2000 PLC (Powerline Communication)

BlueNet PLC (Powerline Communication) allows the energy requirements to be monitored via the existing mains supply without any additional network infrastructure. The BlueNet PLC Concentrator is at the heart of this innovative power monitoring concept. It aggregates the data from all BN2000 PLC PDUs through the mains supply, logs it and makes it available via its Ethernet interface via HTTP, SNMP, CSV and more.

The power data is recorded using compact BN2000 PLC PDUs. Alongside the integrated, high-precision power measuring unit, they also feature two connections for temperature and air humidity sensors. The measured values can also be read out locally on the rotating, two-inch colour TFT display. The additionally integrated Ethernet interface allows access to the data in parallel to the PLC technology. This is appropriate for operation in colocation data centres, to name one example. With this system, both the operator (via PLC) and the customer (via Ethernet) can keep a constant eye on energy requirements.

Save costs with a lean infrastructure

Reducing running costs in data centres is one of the most challenging tasks faced by data centre operators. BlueNet BN2000 PLC can make a considerable contribution to those efforts. The cost of installing, providing and maintaining an IP port in a data centre can very easily add up to €100 per year. By saving on additional IP ports for intelligent PDUs, the costs for energy monitoring can be substantially reduced.

CALCULATION EXAMPLE

Intelligent PDUs with Ethernet/IP port

Example showing the cost per IP port in the data centre = **€100**

PDUs with Ethernet connection = **200 units**

Running costs p.a. = €20,000

With Ethernet-based energy monitoring, this equates to running costs of €20,000 per year to provide the IP ports for the intelligent PDUs.

Intelligent PDUs with PLC

Example showing the cost per IP port in the data centre = **€100**

PDUs with Ethernet connection = **0 units**

PLC Concentrator with IP port: **1 unit**

Running costs p.a. = €100

If BlueNet PLC technology is used, all 200 IP ports for the PDUs are omitted, leaving just one remaining for the PLC Concentrator. This equates to running costs of €100 per year and a saving of €19,900 in the first year alone.

The BlueNet PLC system

BlueNet PLC Concentrator

- Pre-installed energy monitoring software
Management and monitoring of all PLC PDUs without additional cabling
- Monitoring of up to 250 PDUs*
Plug-and-play solution, no additional software or server hardware required
- Industry-standard Powerline Communication (PLC)
- OLED display
- Low power requirement (3 watts)
- No fan
- Internal flash memory and card slot for SD cards
Two infeeds, each with 3 phases or 1 phase, for monitoring the A and B supply

BlueNet BN2000 PLC PDUs

- Precise measurement of current, voltage, power etc.
- Integrated kWh and kVAh recording and saving
- Low power requirement (1 watt)
- Rotating, two-inch colour TFT display
- Industry-standard Powerline Communication (PLC)
- Ethernet interface (HTTP, SNMP, NTP, Syslog etc.)
- Connections for two external sensors (temperature and temperature + air humidity)
- Operating temperature up to 60 °C
- A range of configuration versions
- 16-32 A/230-400 V

BlueNet Powerline Concentrator

The BlueNet Powerline Concentrator collects the data from the PLC PDUs and supplies it to the network via the Ethernet interface.

A passion for innovation

Little characterises our industrial progress more than information technology. High-performance data centres form the core of any business.

The power network plays a significant role in ensuring high-availability and resource-conserving operations. Those wishing to meet the highest data centre standards must pay equal attention to structuring, management and monitoring.

At BACHMANN, this approach is deeply rooted in the company philosophy.

We support your business with intelligent solutions for modern energy management and we do everything to ensure that you will continue to use the latest and most advanced technologies in future. To do this, we develop standardised and customised products and systems. Professional engineering and modern process management combine to meet this goal. Judge us by our results.

The new BlueNet generation

An excellent example is the new generation of our BlueNet products. Whether you're using Power Distribution Units (PDUs) that can be cascaded via Modbus, integrated AC/DC-sensitive residual current monitoring, command line tools or a rotating OLED display – these BlueNet features are pure high-tech.

And there's more: Our features represent safety and efficiency; and can be integrated with DCIM systems. From a single workstation, you can monitor and control your data centre's complex power network locally or remotely.

Join BACHMANN on this journey to a future of low resource consumption, minimum downtime and reduced operating costs.

Rapid identification

For PDUs in the data centre to be distinguished between faster and with greater ease, the new BlueNet PDUs are available in ten different colours. Users can quickly distinguish between A and B supply, 16 and 32 A or single- and three-phase systems. Different areas in the data centre can also be equipped with different-coloured PDUs.

The following colours are available:

Continuous monitoring

The safety, maximum availability and economic viability of data centres and servers are absolutely essential for businesses these days. A faultless power supply to the racks is also important. Despite complying with the standards, modern consumers increasingly cause problems in the electrical systems used, presenting a growing challenge to safe operations. Potential risks include operational interruptions, unexplained functional faults, unexpected tripping of protective devices, fire and even personal injury.

The use of residual current monitoring (RCM) solutions helps to prevent problems, detect them at an early stage and ensure smooth data centre operation. If this monitoring is thorough enough, the time needed to localise and rectify the error can be further reduced and in a best-case scenario, intervention can take place before serious problems arise.

BlueNet helps here with a thorough type B residual current monitoring, jointly developed with Bender GmbH & Co. KG. As required, these modules can be integrated by supply cable, by phase or even for a group of socket outlets.

You will find more information about residual currents in data centres and how to avoid them in our white paper, which can be downloaded free of charge from www.bachmann.com.

Safe connections

BlueNet provides various ways of safely connecting servers with PDUs. In addition to slide-on locking clips, which secure two C13 ports, there is also the height-adjustable universal interlock, which can be used to lock both C13 and C19 ports. With the aid of SecureSleeves, the plugs can not only be secured, but also colour coded – without additional, special cables having to be bought.

White paper on monitoring residual currents in data centres

Operators and managers consider outages, operational faults and interruptions to a data centre nightmare scenarios. If they occur as a result of avoidable mistakes, it's even more annoying. Residual currents are one of these avoidable mistakes and can be detected at an early stage with BlueNet RCM PDUs.

You will find more information about residual currents in data centres and how to avoid them in our white paper, which can be downloaded free of charge from www.bachmann.com.

POWER FRAME COVER and frame

Ideal for workstations and conference rooms

POWER FRAME COVER is the elegant and compact power and data supply solution. The stylish aluminium cover also ensures that the power and data connections are protected from dust and dirt. When the cover is fully open, both sides of the table or desk offer unimpeded access.

POWER FRAME COVER

Article no. | Version

POWER FRAME COVER, 4-way

Only power strips with evenly flush custom modules can be used in conjunction with the POWER FRAME COVER.

DESK 2 | Back to black

Design meets technology

Two selected variants of the DESK 2 multiple-socket outlet are now available in a timelessly elegant black variant. It is designed for flexible use in offices, meeting rooms, home offices or desk-sharing environments, and combines individuality and future-proofing with its modular construction.

reddot design award
winner 2011

The design is unostentatious and straightforward, the materials used are durable and high-quality. Design and the colour black together form a synthesis that impresses lovers of stylish interior design above all else – and the special edition of DESK 2 confirms it: black is back.

The benefits
at a glance

- Design solution for modern workstations
- User-focused 35° orientation
- Custom versions adapt to future requirements
- Covered wiring to the edge of a desk or table

DUE

Form and function in a duet

DUE is the ideal power strip for the kitchen. It guarantees an elegant power connection and can be used just as effectively in the office as in other areas. With its interchangeable covers, it can be colour-coordinated to its surroundings or create accents as desired, even after installation.

The split cover allows DUE to be slid open as required, with a design that looks equally elegant when in use. The low installation depth of less than 45 mm allows it to be compactly integrated into kitchen worktops and desks or installed above drawers.

DUE is also perfect in form and function when wall-mounted.

The benefits at a glance

- "Customise your product" – interchangeable covers available in black, white and stainless steel look
- Low installation depth (less than 45 mm)
- Space-saving even when open
- Supplied with mounting template
- Integrated water run-off

PIX

Design exactly where you need it

The stylish PIX range is a collection of sophisticated, round socket outlet and connector units that can be used in many different ways. On a desk in the office, in the kitchen, in the bathroom, as a lounge element, in the wall or other living room scenarios, PIX provides a huge range of customisable connections.

Used alone or in combination, the decorative rings are available in various colours and can be interchanged. An ingenious, swivel-mounted cover, providing protection from dust and dirt, is available as an option for PIX and can also be retrofitted. The compact form (H x Ø: approx. 50 x 68 mm) and low installation depth (approx. 45 mm) ensure a space-saving installation from above or the front. Retrofitting is also possible.

With its round, flat shape and minimalist appearance, the PIX meets design requirements exactly where you need it.

The benefits at a glance

- Customisable range of connections
- Can be integrated on its own or in combination
- Interchangeable, coloured decorative rings
- With swivel-mounted cover as an option
- Low installation depth (approx. 45 mm)
- Simple mounting from above, retrofitting possible too

KAPSA

Modularity and minimalism combined

KAPSA's classical, reduced lines make it a power strip that is both design-orientated and space-saving – designed for the kitchen, office and many other areas.

The cover – which can be flipped open and interchanged – provides protection against external influences and is available in several versions. Three-way, modular equipment options, thereby allowing flexible configuration. Installation from above guarantees simple mounting – also optionally available as a retrofitted solution. A low installation depth of approx. 45 mm and a solid design characterise KAPSA and confirm the well-worn saying: less is more.

The benefits at a glance

- "Customise your product" – covers can be easily interchanged and are available in several versions
- Three-way, modular equipment options
- Aluminium cover with high-quality feel
- Low installation depth (approx. 45 mm)
- Simple mounting from above, retrofitting possible too

HDBaseT Switch

The plug-and-play solution for meeting points and meeting rooms

Share information from up to 4 devices (laptops) at the touch of a button. The buttons are already integrated in the relevant CUSTOM modules. The signals from the changeover switch to the display or projector are either transferred via HDBaseT or as original HDMI signals.

The benefits at a glance

- Zero-loss transmission of image and sound signals via CAT cable up to 70 metres
- Simple cabling
- Plug-and-play
- No programming needed
- Resolution up to UHD (4K) possible
- Compatible with HDBaseT-capable displays and projectors

Custom modules

As versatile as your applications

BACHMANN custom modules are the central components of video, audio and network connections. Their construction offers you simple and flexible installation in FACILITY SOLUTIONS, rack systems and electrical installations.

The versatility of custom modules makes BACHMANN FACILITY SOLUTIONS even more flexible. With the easy-to-swap modules, you can create units to meet the individual data, video and audio connection requirements of your customers quickly and simply.

BlueNet 1500

Technologie BN1000 Modul

NEW

BlueNet BN1500

The complete solution for small and medium-sized IT infrastructures

BlueNet
Efficient Power Management

BlueNet BN1500 technology offers the ability to measure electrical parameters and connect or switch off three switching groups, in addition to a convenient remote management function for monitoring your IT infrastructure. Additional temperature measurement using an external temperature sensor allows the ambient temperature to be determined. Measured values are provided via the web interface and via SNMPv2c.

The BlueNet Wi-Fi app is available for conveniently displaying collected data on mobile devices and simple remote switching. An e-mail alarm feature or automated switching for individually configurable load, amperage and temperature threshold values offers additional administrative safety.

Along with an Ethernet port, BN1500 products are also equipped with an RP-SMA antenna connection. You simply choose your preferred connection type, whether Ethernet or Wi-Fi.

The benefits at a glance

- Three measuring and switching groups of 16 A each
- Measurement of ambient temperature and electrical values.
- Load management and cost control
- Management via web interface, SNMPv2c and smartphone app
- Lean user management
- Wi-Fi and Ethernet connectivity (parallel operation possible)
- SSL-encrypted e-mail alarm feature

App for smartphones or tablet PCs

The app is available from the Play Store (for Android) or the App Store (for iOS) by searching for BlueNet Wi-Fi. The present temperature, current switching statuses and current power metering data are displayed. The socket outlets can be switched on and off. If a Dynamic DNS address is entered, this entire functional scope can be accessed remotely via 3G or 4G.

SMART Adapter

Lifestyle, convenience, safety.

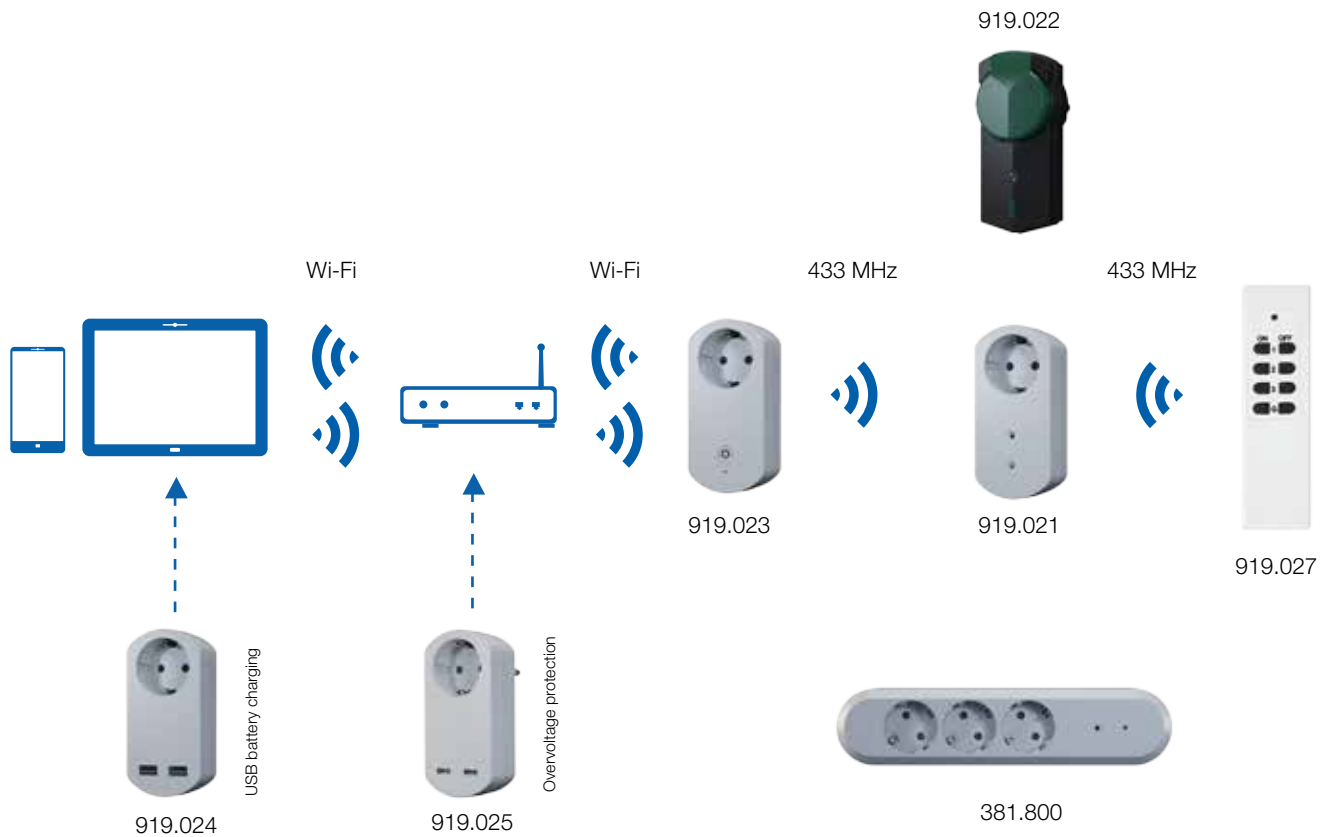

The new SMART Adapter series offers convenience and safety in response to your demand for intelligent living – all packaged into a timeless, modern design. The SMART Adapters offer greater security for your entertainment electronics and allow electrical consumers to be easily and remotely switched using a smartphone or remote control – and end devices to be charged with USB standard.

Easy to use – great benefits.

Our SMART Adapters with integrated radio remote switches can either be put into operation in a Wi-Fi network with a user-friendly smartphone or tablet app, or by using the remote control option which is also available. Both solutions then allow you the convenience of switching your devices remotely. Wi-Fi SMART Adapters can also be linked with the 433 MHz radio SMART Adapters. Devices which need to be charged using a USB cable can be charged with a current of up to 3.1 A without sacrificing a socket outlet – and at up to 1.5 A/port. The overvoltage protection adapter protects electronic devices using state-of-the-art technology.

The benefits at a glance

- Easy to set up and operate
- Networked radio and Wi-Fi adapters
- Added safety thanks to overvoltage protection
- USB charger adapter with 3.1 A total charging current
- Very flexible

Smart complete system – flexible use

The socket outlets on the output side for the radio and Wi-Fi SMART products can be switched from a distance via remote control or an app for smartphones and tablet PCs. It is easy to train the remote control function, which can be done quickly. After this has been done, there is nothing else to prevent you from conveniently and remotely switching consumers. Wi-Fi SMART products are detected using a simple process in the corresponding app on your smartphone or tablet and now also offer the option of being remotely controlled alongside timer, countdown and absence functions.

In addition, radio-based SMART products can be trained and also switched using the app.

A complete system which can be easily retrofitted – and which fulfils the demand for user-friendliness and flexibility in one holistic package.

- Extended fixing claws with increased clamping force

Outdoor socket outlet

New: Now also suitable for right-angled plugs. Very well-suited for use in utility rooms – e.g. for washing machines and dryers.

Article no. | Version

Outdoor socket outlet, lockable, for right-angled plugs

Series 9015 230 V, 16 A, IP44, only for mounting on wall, L/W/H 185 x 85 x 80 mm
 924.3491 | 1 x socket outlet with earthing contact, supplied without lock and plug

The benefits at a glance

Ideal for supplying electricity:

- In the garden
- In the basement
- In the garage etc.

Examples for use:

- Christmas lights
- Lawnmowers
- Light chains
- Electric grills

Construction site bulb socket with E27 holder – assembled

E27 holder made of plastic

- Cable: 0.2 m length H03VV-F2 x 0.75 mm²
- 250 V/4 A/T180

Article no. | Version

Construction site bulb socket, not packaged, can be procured individually

E27 holder made from plastic – cable 0.2 m H03VV-F2 x 0.75 mm²

641.1701	With screw terminal (terminal block) 2-pole, black
641.1711	With push-in terminal, black
641.2701	With screw terminal (terminal block) 2-pole, white
641.2711	With push-in terminal, white

Cord intermediate dimmer, series 8113 reverse phase control dimmer

50 Hz, 20 to 300 W/VA

Can be used for

- Low-voltage halogen lamps with electronic transformers
- High-voltage halogen lamps
- Light bulbs

Article no. | Version

Cord intermediate dimmer, series 8113 reverse phase control dimmer

Dimensions: L/W/H 130 x 60 x 35 mm

924.353 | Transparent

The benefits at a glance

- Slide controller for actuation using hands and feet
- Mode of connection (intermediate or cord end) freely selectable
- Buzz-free
- No fuse
- Separate On/Off switch
- Orientation light in the darkness

LED cord touch dimmer, series 8119 with soft start and memory function

Electronic, transistor-controlled, phase-controlled dimmer without inductor

Can be used for:

- Dimming LED lamps
- High-voltage halogen lamps
- Light bulbs

Article no. | Version

LED cord touch dimmer, series 8119 with soft start and memory function

230 V~ (+/- 10%), 50 Hz, 5-100 W/VA, LED 3-35 W,

924.354 | Black

The benefits at a glance

- On/Off/Dimming using a push-button
- Active current limiting with overtemperature protection
- Low-noise operation
- Flicker-free dimming thanks to option of setting basic and maximum brightness
- For connecting cables with a diameter of max. 7.5 mm
- Compact design
- Dimensions: L/W/H 81 x 32 x 23 mm

LED cord dimmer, series 8118

Electronic, transistor-controlled, phase-controlled dimmer without inductor
 230 V~ (+/- 10%), 50 Hz, 5-100 W/VA, LED 3-35 W, dimensions: Ø 33 mm x L 110 mm

- Can be used for:
- Dimming LED lamps
- High-voltage halogen lamps
- Light bulbs

Article no. | Version

LED cord dimmer, series 8118

Electronic, transistor-controlled, phase-controlled dimmer without inductor
 230 V~ (+/- 10%), 50 Hz, 5-100 W/VA, LED 3-35 W

924.0163	Black, without cable
924.0164	White, without cable
924.0165	Transparent, without cable

The benefits
 at a glance

- On/Off/Dimming by turning the housing
- Active current limiting with overtemperature protection
- Low-noise operation
- Flicker-free dimming thanks to option of setting basic and maximum brightness
- With microswitch and fine grid
- Can be freely positioned thanks to symmetrical design
- For connecting cables with a diameter of max. 8 mm

Flush pushbutton switch, series 3030

Flush pressure switch with constant switch position

2(1) A, 250 V~, T 185 °C, off switch, 1-pole
 Central fixing by M 10 x 1 mm, screwed contacts, bell-shaped nut screws on from above

- Can be used for:
- H03VV-F 2 x 0.75 mm²
 - H03VV-F 2 x 0.75 mm²
 - H03VV H2-F 2 x 0.75 mm²

SMART PLUG/FLAT PLUG

Flat plug for safety and convenience

The SMART PLUG/FLAT PLUG allows optimum use to be made of limited space behind cupboards, in the kitchen or office. The plug fits all common flush power socket systems. When plugged in, it lies neatly on the socket outlet and thereby allows power to be used in very tight spaces. When using the SMART PLUG/FLAT PLUG, devices or furniture can be located very close to the wall. When visible in the room, the flat shape makes a bold design statement.

Unwieldy plugs which are hard to release are instantly a thing of the past. Thanks to the smart lever function of the SMART PLUG with ejection mechanism, the plug can be pulled out with little effort, thereby ensuring convenient unplugging of devices.

The benefits at a glance

- Flat shape, design with straight lines
- Fits all common flush power socket systems
- Allows power to be used in very tight spaces, especially behind furniture
- Quality, VDE-approved flat plug
- Smart lever function means that little force has to be applied and plug can be loosened with ease
- Earthing contact plug CEE 7/7

TWIST

Power outside the box

TWIST is a power strip for the kitchen, office, lounge and additional, personalised uses. With its compact design and low installation depth, TWIST is easily integrated in a space-saving way into kitchen worktops or desks, for example. Because the power cable is routed close to the housing, the installation depth is only around 40 mm, so the unit can be easily installed above a drawer.

Various surface versions allow TWIST to fit effortlessly into classical, modern concepts – in addition to lively shape and colour concepts. After use, simply rotate the cover and the socket outlets disappear underneath it.

TWIST has won numerous highly renowned design prizes including the Good Design Award 2014, the Red Dot Product Design Award 2012, the Focus Open 2014 Silver and Interior Innovation Award 2014, the Best Office Award at the Office Next Moscow trade fair 2014, the interzum award: intelligent material & design 2015 and lastly the German Design Award 2016.

The benefits at a glance

- Multiple winner of design awards
- Sophisticated twisting lock
- Low installation depth (approx. 40 mm)
- Compact design (H x Ø: approx. 42.5 x 115 mm)
- Space-saving cable routing
- Quick and easy to install

TWIST is so compact that it can be easily installed above a drawer.

DUE

Form and function in a duet

DUE is the ideal power strip for the kitchen. It guarantees an elegant power connection and can be used just as effectively in the office as in other areas. With its interchangeable covers, it can be colour-coordinated to its surroundings or create accents as desired, even after installation.

The split cover allows DUE to be slid open as required, with a design that looks equally elegant when in use. The low installation depth of less than 45 mm allows it to be compactly integrated into kitchen worktops and desks or installed above drawers.

DUE is also perfect in form and function when wall-mounted.

The benefits at a glance

- "Customise your product" – interchangeable covers available in black, white and stainless steel look
- Low installation depth (less than 45 mm)
- Space-saving even when open
- Supplied with mounting template
- Integrated water run-off

PIX

Design exactly where you need it

The stylish PIX range is a collection of sophisticated, round socket outlet and connector units that can be used in many different ways. On a desk in the office, in the kitchen, in the bathroom, as a lounge element, in the wall or other living room scenarios, PIX provides a huge range of customisable connections.

Used alone or in combination, the decorative rings are available in various colours and can be interchanged. An ingenious, swivel-mounted cover, providing protection from dust and dirt, is available as an option for PIX and can also be retrofitted. The compact form (H x Ø: approx. 50 x 68 mm) and low installation depth (approx. 45 mm) ensure a space-saving installation from above or the front. Retrofitting is also possible.

With its round, flat shape and minimalist appearance, the PIX meets design requirements exactly where you need it.

The benefits at a glance

- Customisable range of connections
- Can be integrated on its own or in combination
- Interchangeable, coloured decorative rings
- With swivel-mounted cover as an option
- Low installation depth (approx. 45 mm)
- Simple mounting from above, retrofitting possible too

KAPSA

Modularity and minimalism combined

KAPSA's classical, reduced lines make it a power strip that is both design-orientated and space-saving – designed for the kitchen, office and many other areas.

The cover – which can be flipped open and interchanged – provides protection against external influences and is available in several versions. Three-way, modular equipment options, thereby allowing flexible configuration. Installation from above guarantees simple mounting – also optionally available as a retrofitted solution. A low installation depth of approx. 45 mm and a solid design characterise KAPSA and confirm the well-worn saying: less is more.

The benefits at a glance

- "Customise your product" – covers can be easily interchanged and are available in several versions
- Three-way, modular equipment options
- Aluminium cover with high-quality feel
- Low installation depth (approx. 45 mm)
- Simple mounting from above, retrofitting possible too

Kitchen connection box

The universal assembly aid for connecting hobs and ovens

The kitchen connection box is the universal assembly aid for the kitchen. It is used when a hob and an oven are not installed as a combined appliance. The kitchen connection box serves as a power distributor for separately installed kitchen appliances in order to centrally supply them with power from an existing cooker connection socket. It is available in four different supply cable versions and thereby permits flexible use depending on the situation in the respective kitchen.

It is not necessary to install additional socket outlets, which reduces both the costs and the time required to install the kitchen appliances.

Article no. | Version

Kitchen connection box

Grey, with screw-mounting eyes, connected load up to 10 kW

H05VV-F 5G 2.50 mm² for cooker socket

923.002	<ul style="list-style-type: none"> · Kitchen connection box 10 m · Cooker connection socket 2.0 m; hob 10.0 m and oven 10.0 m

The benefits at a glance

- Low built-in depth (approx. 34 mm)
- Power distribution for separately installed kitchen appliances
- Possibility of continuing to use existing cooker connection socket
- Saves costs as no need to fit sockets later
- Rewireable WAGO® terminals
- Can also be used in combination with an induction cooker
