# Trendsetter in Fan Technology

*Uncompromising quality  
made by ebm-papst*

## Among the best.

Trendsetting with innovative technologies. Listening to customers' needs. Developing new ideas to meet requirements and realising them with pioneering spirit. This philosophy has made ebm-papst the technological leader in the world of fans.

A brand which has very few alternatives because every fan is a product of decades of application know-how gained from large-volume production and because we are in a position to produce highly efficient quality products. Our intelligent solutions for electronic cooling ensure that you are one step ahead of competitors thanks to innovative, reliable top quality technology which is cost-favorable and in line with market requirements. And if required, tailor-made right down to the last detail. In other words if you need fans which don't actually exist, contact us.

Insist on ebm-papst.

# Company profile: ebm-papst

The entire scope of air and drive technology: This is the world of ebm-papst. Originating from the companies ebm, PAPST and mvl, all three rich in tradition, ebm-papst has at its disposal a unique range of products that makes us world market leader. We unite the strengths of three remarkable companies – each of them having worked hard to succeed in attaining a leading position in the most diverse fields and segments. More than 8.500 members of staff in Germany and throughout the world develop, produce and distribute our motors and fans. Striving for perfect solutions in applications in the different industries is what determines our daily work. Those who know us know the high standards we apply to our work and our creed: to be as close to our customers as possible and to be simply the best in terms of innovation and reli-

*Our location in St. Georgen*

*Left:*

*Our headquarters in Mulfingen*

*Right:*

*Our location in Landshut*

For years, ebm, PAPST und mvl have been working together hand in hand. For the benefit of our customers, we use the synergy effect generated by our co-operation and the product ranges that complement each other so well. And so, in 2003, we moved even closer and documented this closeness in a joint public appearance and a joint name: ebm-papst.

#### We remain the same – only better!!

Though our outward appearance may have changed, our “inner” values remain the same. We still want you to enjoy being close to your established contacts, making their commitment and know-how help you succeed in your specific task. And, of course, we also want you to enjoy the same quality and selection of ebm, PAPST and mvl products: ebm-products are now available from ebm-papst Mulfingen  
papst-products are now available from ebm-papst St. Georgen  
mvl-are now available from ebm-papst Landshut.

#### Passionately involved in R&D

Our catalogues just list the results of our incessant efforts in R&D: products of highest quality and reliability. After all, it is our passion to constantly try something new and improve what we have. In doing so, we take advantage of the latest development methods and state-of-the-art technology and invest quite heavily in R&D facilities. Best of all, though: we rely on excellently trained and skilled engineers and technicians to be at your service in R&D and Sales & Distribution.

#### Producing and assuring high-quality products and services

This is our promise that knows no boundaries. Whether we manufacture in our national headquarters or in one of our 10 international production facilities – we insist on the same high level of quality! No cheap compromises when it comes to quality control! Our uncompromising QA extends through all process stages: from customer consulting engineering, selection of materials certified vendors, manufacturing of parts all the way through shipping. On top of this, our products have to pass the most rigorous test procedures under all realistic operating conditions: endurance test, salt spray test, vibration test, or in the room for precision noise measuring, just to mention a few. And the product gets approval for series pro-

duction only after all the desired characteristics have been determined to be just right.

Environmental protection is another priority with ebm-papst. This is why we have developed our product line in EC technology, which makes for very low power consumption, and why we take pride in our manufacturing philosophy. There is absolute focus on environmental care in production, recycling, waste and waste water disposal.

#### Globally Domestic

In order to be a specialist for customised solutions throughout the world, you need strong partners. Globally Domestic – i.e. being present all over the world and being a national company in each individual country – is how we have established ourselves with our successful subsidiaries in all important markets on this globe. And so you will always find ebm-papst close to home and knowing the demands of your very markets. Besides, our worldwide production alliance serves as a basis for competitive pricing. Our global services and logistic outlets, i.e. IT networking, are assuring short reaction times and just-in-time delivery.

All our efforts are documented in a comprehensive quality management system, both for products and services. Being certified as complying with the tough requirements of the international standards DIN EN ISO 9001, ISO/TS 16949 and DIN EN ISO 14001 is just one seal of approval we have got for our incessant strive to provide only the best quality products and services.

# The Ultimate: Quality in Detail

## Drive know-how

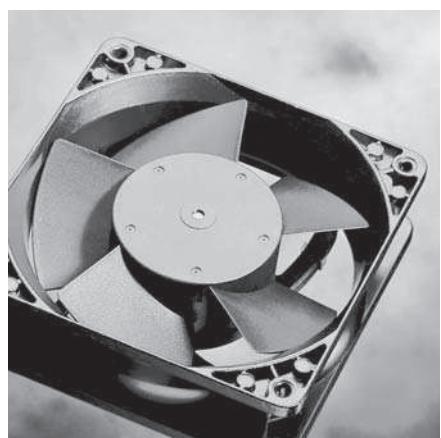

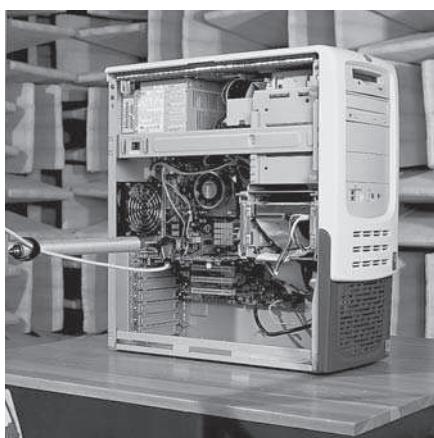

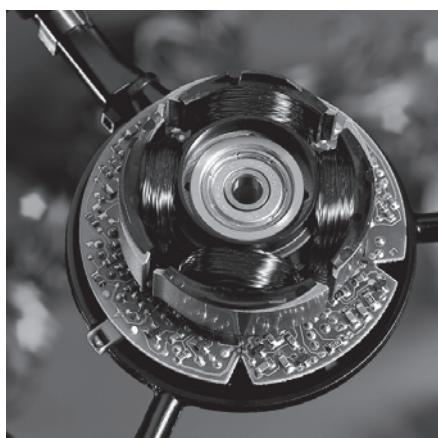

For the past 60 years all conceivable types and applications of drive technology have played an essential role at ebm-papst. A commitment that is the foundation for the development of optimum drive solutions – regardless of the type of fan and its usage. DC fans are generally equipped with electronically commutated motors; In order to save as much space as possible commutation electronic components are integrated in the hub of the fan. Our AC fans are mostly driven by shaded-pole or capacitor motors based on the external rotor principle. In the 3900 and 9900 range of particularly slim fans internal rotor motors are used.

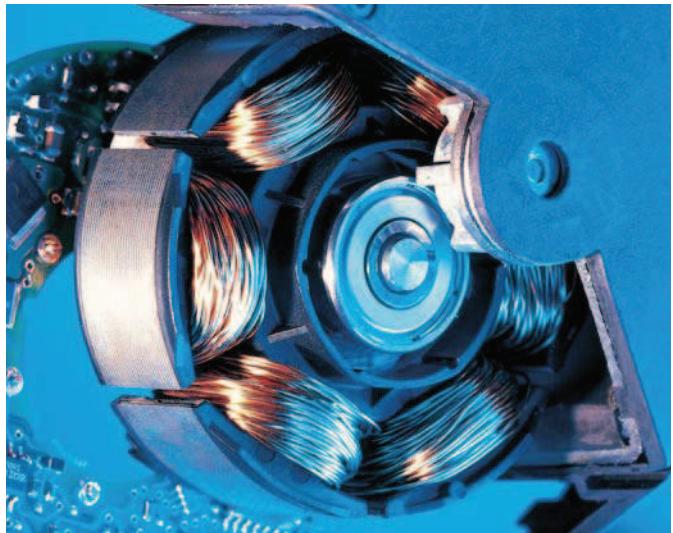

## Low noise performance

Our aerodynamically optimised design and high mechanical precision produce outstanding noise properties in series production. So-called “soft” commutation electronics of the DC fans ensure an excellent noise performance. By avoiding steep switching ramps when the individual coils are switched, this reduces the structure-borne noise from the motor. Computer-aided measurements performed in the most modern sound measuring chamber are conducted on each fan model from the very beginning.

## Long service life

The bearing system plays a vital role both, in the long life time and quietness of equipment fans. The SINTEC compact bearing provides most of the equipment fans with a proven bearing system. Constant low noise during the entire operating time and considerably lower shock sensitivity are the outstanding features of this bearing technology. Also, with regard to temperature endurance, Sintec compact bearings can be used without problems in most applications. Despite the slightly higher noise and shock sensitivity of ball bearings, this bearing technology should be given preference when exposed to extreme thermal and adverse application conditions (e.g. extreme environmental conditions, critical installation position, etc.). The service life data provided in this catalogue is based on extensive service life tests and mathematically / scientifically proven service life calculations. Our product descriptions are continuously updated with all relevant data obtained from long-term tests.

### Streamline: Aerodynamics

With the aid of the most modern computer programs, we are able to optimise the fan impellers and the inner shape of the housing. Air output and available motor performance are exactly matched with the size of fan.

### Sturdy construction – in metal or plastic

Fans of metal construction: Sturdy and indestructible. The housing is made of an aluminium alloy whereas the metal surfaces that are subject to corrosion are permanently protected by a black, impact- and abrasion resistant electrophoretic baked enamel. This particular version is highly recyclable. Fans with fibreglass reinforced plastic housing and impeller: Excellent stability and low weight distinguish this highly efficient fan concept. The metal housing and plastic impeller combine the advantages of both types of design.

### Product images

The dimensioned drawings and product photos that appear in the catalog are for orientation purposes and may differ in some details from the actual product design.

### Safety all inclusive

It goes without saying that all ebm-papst fans conform to the approval requirements of the VDE (Association of German Electrical Engineers) and the standards and regulations of UL and CSA. All fans conform to the European Standard EN 60335-1 or EN 60950 plus those of the UL (Underwriter Laboratories) and CSA (Canadian Standards Association). ebm-papst fans meet the highest requirements of electrical safety. Depending on the type, they are either impedance protected or equipped with a temperature safety switch, a scheme to prevent overload during locked rotor, alarm function or have speed monitoring and speed control.

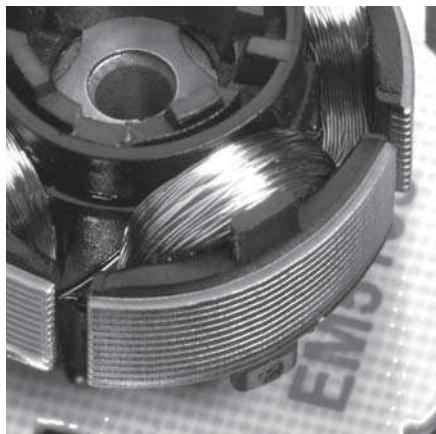

### Quality in detail

It is the seemingly trivial that makes the difference when a product is labelled 'made by ebm-papst': consistent maintenance of development and construction specifications; target-oriented design; and assured quality across the entire process chain are the reasons why running times of over 150,000 hours are not unusual. The no-compromise ebm-papst quality assurance spans over all process levels – from the choice of materials and the use of carefully selected, certified suppliers, from the production of parts up to final assembly. The sum of all these apparently minor details results in ventilation products with superior lifetimes and reliability.

### Product liability

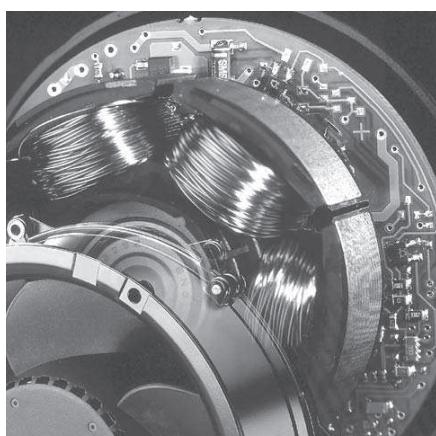

Motors and fans from ebm-papst are components; as such, their function is determined in the customer unit.

# Tailor-made to Meet Your Special Requirements

## Practice-oriented: Fans – specified and intelligent

ebm-papst has always developed customer-specific intelligent fans which meet the exact requirements of the application. We provide a wide range of standard fan types, in many sizes and designs; with intelligent motor features, monitoring and control functions as well as special constructions for use under extreme conditions. They are all based on the standard type fan which you will find in this catalogue. Special fan types for your application can be produced in economical batch sizes. Our expert engineers will assist you in selecting the right configuration.

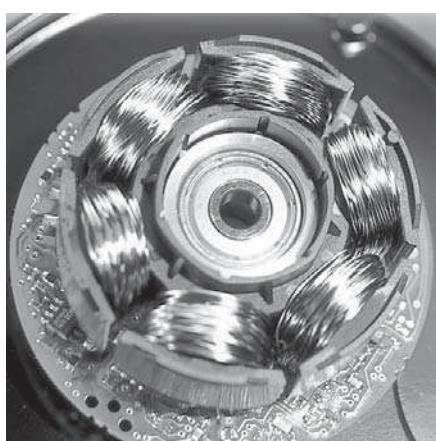

## Innovation at its best:

Vario-Pro® with “inside intelligence”. Its programmed intelligence thanks to customer-specific configured software modules makes the cooling of electronics even more economical and flexible. For example, temperature-dependent speed profiles are possible with a number of freely selectable interpolation points. External speed settings and a variety of combinable alarm and tachometer functions can also be programmed. The digital motor management achieves high precision of control functions.

## Higher protection class for every type of application

ebm-papst provides on request a variety of fan series which conform to the requirements of Protection Class IP 54: Their stator and all electrical components are fully encapsulated. Stainless steel ball bearings can be used for operation in particularly aggressive media and use under extreme environmental conditions, thus providing additional safety.

## Virtually everything is possible

Regardless of your cooling and ventilation tasks, we develop the right solution and what is more, the most economical one. Based on the fans listed in this catalogue, well over 4000 different versions are available.

## Temperature-controlled fans

Fans with temperature-controlled speed have particularly quiet cooling characteristics. Thanks to IC technology, they adapt their speed to the current cooling requirements which results in drastic reduction of noise in most operating modes. A temperature sensor provides the fan with thermal information: Either externally via a single lead or integrated into the hub of the fan.

## Speed setting via interfaces

With a wide range of DC fans with separate control input, ebm-papst provides an alternative to the NTC controlled types of fans. They are especially suitable for systems and units which already have standard interfaces for varying speed via internal switching and control circuits. Main applications are units which demand load-dependent individual speed profiles or systems with stand-by minimum cooling requirements and varied speed increase at varying power peaks.

## "Electronic tacho" thanks to sensor signal

You wish to be informed about the current fan speed at all times? ebm-papst has fans with an integrated "electronic tacho" which registers the actual value of the fan speed. Via an integrated sensor, the fan generates speed-dependent signals which can be directly utilised. Depending on the number of poles of the motor (2, 4 or 6 pole), 1, 2 or 3 pulses per revolution are generated.

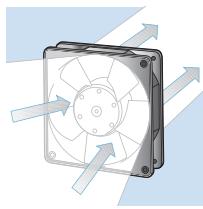

## Alarm signal for more safety

If your application requires monitored fan operation in addition to speed monitoring, ebm-papst also provides a multitude of varying alarm signals. Depending on the type of fan in question, the signal is either static, already evaluated or interface-compatible. The alarm signal output provides reliable long term monitoring and status signal when critical operating conditions evolve.

## TURBOFAN

The DC fans with the 3-phase EC motor technology for exact speed control and high power margin. The drive and control electronics of the TD motors is pre-wired and already integrated in the fans.

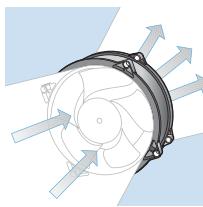

# Types of Fans and their Function

## Axial fans: High flow rate at medium pressure

The air flow in axial fans, whose blower wheel is similar to that of a propeller, is conducted to a great extent in parallel to the axis of rotation, in other words in the axial direction. Axial fans with free air delivery at zero static pressure have the lowest power input that rises with

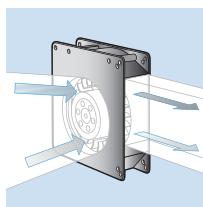

increasing counterpressure. Axial fans for the cooling of electronic equipment are mostly equipped with external housing and an electric motor integrated into the fan hub. This compact construction allows space-saving accommodation of all devices; the flange is equipped with mounting holes.

## Diagonal fans: High flow rate at relatively high pressure

At first glance diagonal fans only differ slightly from axial fans. Intake is axial whereas exhaust is diagonal. Due to the conical shape of the wheel and housing the air is pressurised

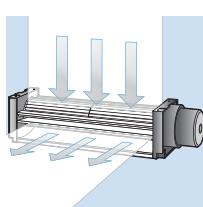

higher. In direct comparison with axial fans of the same size and comparable performance, these fans are distinguished by the lower operating noise.

## Radial fans: Limited flow rate at high pressure

Many of the cooling problems that occur can be optimally solved by axial and/or diagonal fans. If however, for example the required cooling air has to be conducted round an angle

of 90° or if high pressure is necessary, radial fans are more effective. For your application, ebm-papst offers not only complete radial fans but also motor/blower wheel combinations without external housing.

## Cross flow blower: High flow rate at low pressure

Cross flow blowers are used above all for large-surface air flow in appliances. The air flows through the blade roller twice in the radial direction: At the suction point from the

outside to the inside and at the exhaust point from the inside to the outside. Whirls form in the roller due to the vanes which guarantee a steady flow of air through the blower wheel.

# Selecting the Correct Fan

## 1. Dissipated heat

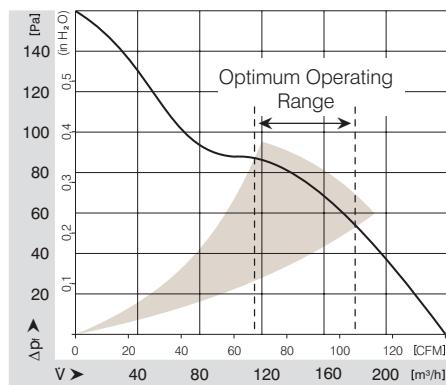

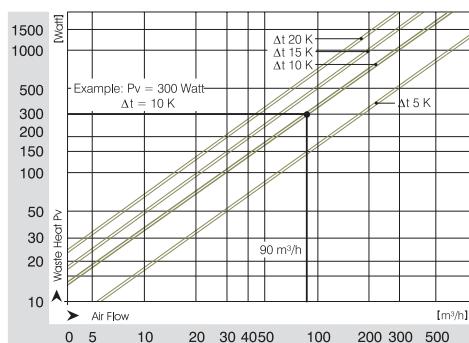

A large amount of the energy consumed by electrical and electronic devices is converted into heat. In selecting the correct fan, therefore, it is important to determine the dissipated heat that must be removed. The electrical power consumption of the unit to be cooled, often represents a suitable value for this purpose.

## 2. Permissible temperature rise

The air flow which the selected fan is required to generate, is determined by the dissipated heat and the permissible rise ( $\Delta T$ ) of the cooling air flow (from entry to exit of the device to be cooled). The max. allowable  $\Delta T$  depends greatly on the temperature sensitivity of the individual device components.  $\Delta T = 5\text{K}$  means e.g. that the average air flow leaving the device to be cooled may only be  $5^\circ\text{C}$  warmer than the ambient temperature (a large volume of air is required for this purpose). A lower air flow rate is sufficient if a higher temperature difference (e.g.  $\Delta T = 20\text{K}$ ), can be tolerated.

## 3. Required cooling air flow

- In the below diagram a horizontal line is drawn from the dissipated heat to intersect with the selected  $\Delta T$  line.

- Read down from this point to obtain the required value for the cooling air flow.

Diagram-formula:

$$\dot{V} [\text{m}^3/\text{h}] \approx 3 \cdot \frac{P_v [\text{W}]}{\Delta T [\text{K}]}$$

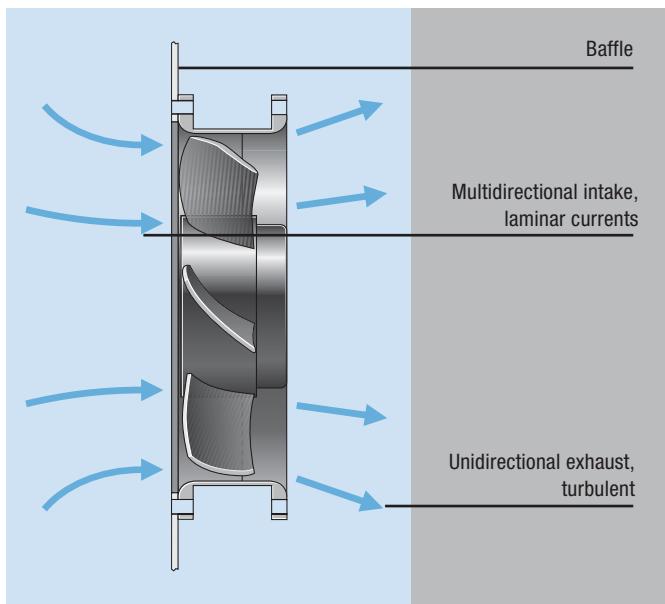

## 4. Optimum operating range

The required fan, however, must also be able to deliver a suitable static pressure  $\Delta p_f$ , in order to force the cooling air through the appliance. A fan must therefore be selected that provides the required air flow performance within its optimum operating range (see also the performance curves under technical data).

## 5. Fan selection

If the requirements of an application are fulfilled by more than one fan, the noise level, space requirements, economy and ambient conditions will assist in making the final choice.

# Fan installation

## Information on installation

When a fan is operated for the first time in an application, the user may have noticed that the flow rate in the appliance was lower than expected. What is the reason for this?

- The values stated in this catalogue were determined under optimum, constant and comparable measurement conditions.
- Ideal mounting conditions under which free air intake and exhaust are present is seldom feasible in practice. Quite frequently the fans must be mounted in the proximity of other components or cabinet panels. As a consequence, the intake and exhaust currents may be restricted causing the air flow to diminish and the noise level to increase. Fans are particularly sensitive to obstructions which are positioned directly in front of the output cross section as they often cause an increase in tonal noise.

**Our advice:** The distance between the fan and adjacent components should be at least equal to the mounting depth of the fan.

## Intake or exhaust side installation

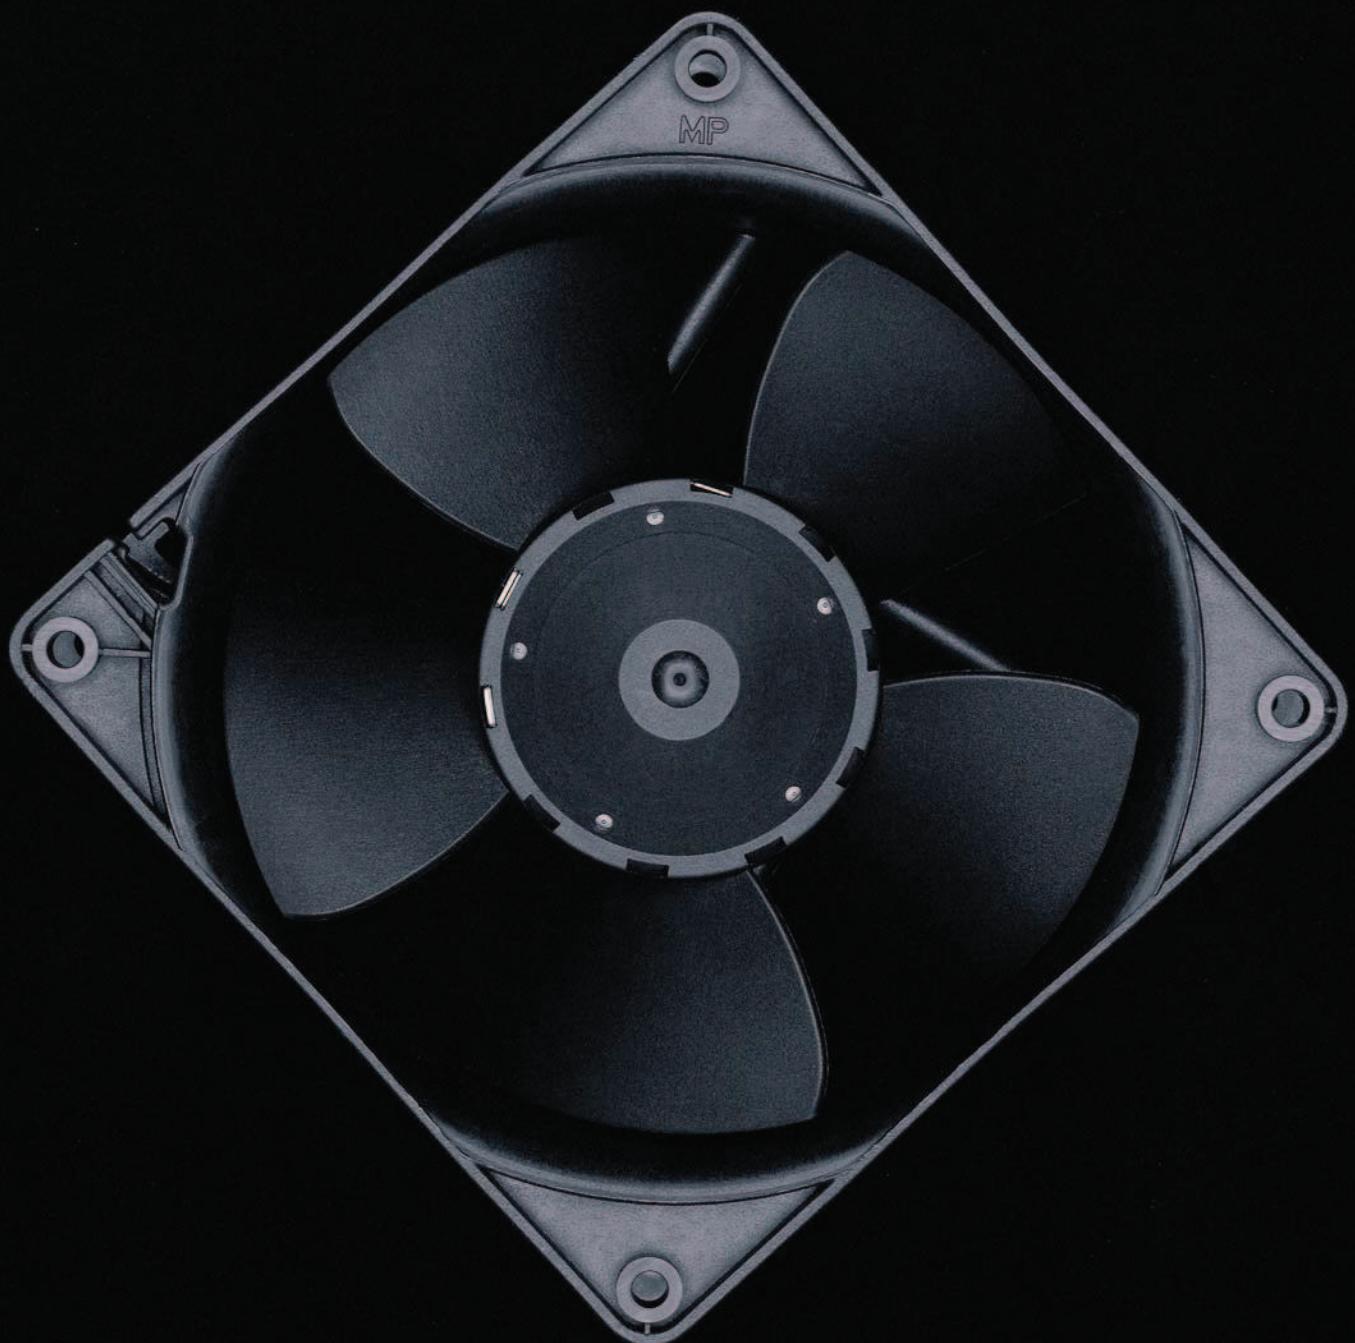

Under ideal conditions, the operating point is represented as the intersection between the characteristic fan and device curves, regardless of whether the fan is positioned at the air intake or exhaust side of the device. In addition to ensuring the required flow rate, several additional aspects must be considered for determining an appropriate fan concept.

The intake air currents of a fan are mainly laminar, comprising nearly the entire suction area. By contrast, the exhaust air of a fan is generally turbulent, while it flows on a preferred direction, e.g. axial for an axial fan. The turbulences of the exhaust intensify the heat transfer from components within the air currents, so that mounting the fan at the air intake side of the device is recommended for cooling and heating. Mounting the fan at the device intake is also advantageous because the fan will not be subjected to the dissipation heat of the device. Therefore, it operates at low ambient temperatures and has a higher life expectancy.

## Accident prevention

With their high efficiency, our fan products operate at high speeds, which can pose a risk of injury. To prevent injury, they may be put into operation only after they have been properly installed and equipped with suitable protective devices (such as finger guards).

DC Fans Overview	15
DC Axial Fans	19
DC Radial Fans	65
DC Fans Cross-Flow	80

## Technical Information

### Range of fans

Users of ebm-papst fans have the widest range of DC axial fans at their disposal: From 25 mm to 280 mm in size. Every single type of fan can be optimally integrated in the respective appliance concept. The highly economic brushless motor technology of these fans provides a unique variety of intelligent innovations that can be realised today at prices that would have been unthinkable just a few years ago.

**Electronic protection against reverse polarity**  
ebm-papst DC fans have electronically commutated drives with electronic protection against reverse polarity. The electronics are conveniently located in the fan hub.

### Product life expectancy

A distinctive feature of DC fan technology is the convincingly high product life expectancy. Thanks to the excellent efficiency of the brushless drives, the thermal load of the bearings is reduced thus considerably increasing the life expectancy of the fans.

### Protection Class

DC fans with sleeve and ball bearings are powered by Class E insulated motors. All ebm-papst fans conform to the requirements of Protection Class IP 20. Fans conforming to IP 54 and special protection classes are also available.

### Supply voltage

The supply voltage of ebm-papst DC fans can be varied thus the airflow can be matched optimally to the cooling requirements and noise reduced to a minimum. ebm-papst DC fans can be driven with voltages that are reduced as much as 50 % or increased by 25 % of their nominal voltage (see voltage range in the tables containing technical data).

### Speed control

VARIOFAN – the fans with IC technology and temperature-dependent speed control. VARIOFANS always cool at the speed required by the appliance resulting in speeds as much as 50% lower than those of standard fans and a drastic reduction of the noise level in almost all operating conditions. VARIOFANS are controlled without dissipation losses: At lower speeds their power consumption is reduced proportionally.

# DC Axial Fans

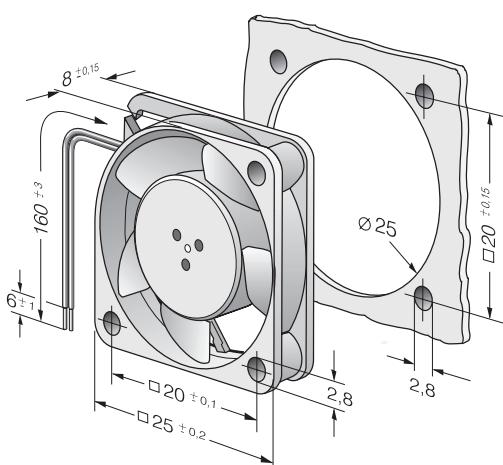

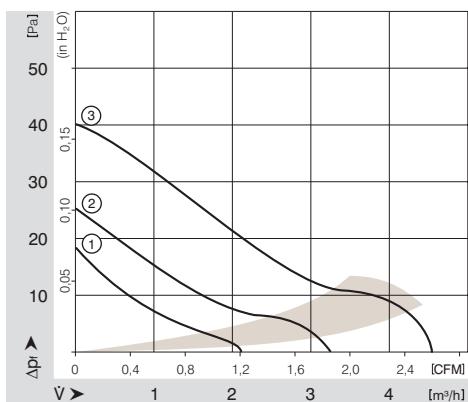

Series 250 25 x 25 x 8 mm

- DC micro-fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity. The fan only operates when the polarity is correct. Impedance-protected against locked rotor and overloading.
- Fan of fibreglass reinforced plastic. PBT housing, PA impeller.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Electrical connection via 2 leads AWG 28. Stripped and tinned ends.
- Mass 5 g.

# DC Axial Fans

Series 620 60 x 60 x 25 mm

- DC fan with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Fan of fibreglass reinforced plastic.PBTP housing, PA impeller.
- Air exhaust over struts. Rotational direction CW looking at rotor.
- High pressure build-up.
- Low impact sound development.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 85 g.

# DC Axial Fans

Series 600 N 60 x 60 x 25 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Fan of fibreglass reinforced plastic. PBTP housing, PA impeller.
- Air exhaust over struts. Rotational direction CW looking at rotor.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 66 g.

V-Types

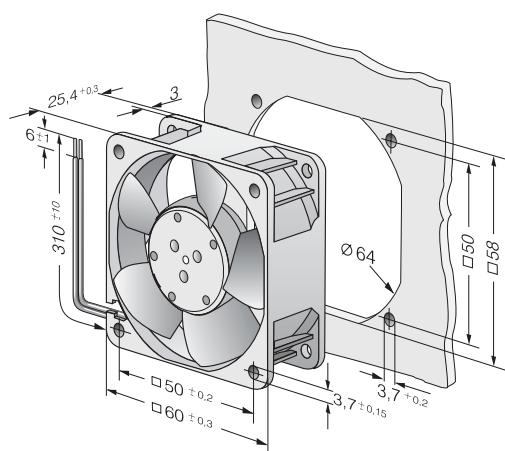

The temperature sensor for controlling the motor speed is not included in delivery.  
Temperature sensor LZ 370 see accessories.

I-Types

Temperature sensor (NTC-resistor) for controlling the motor speed is positioned directly in the air flow.

## NEW TYPES

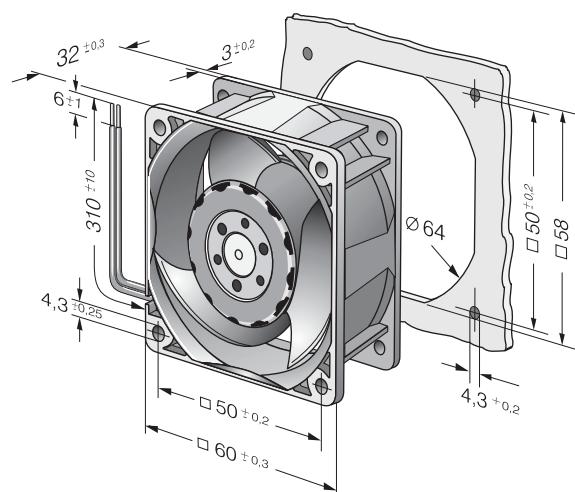

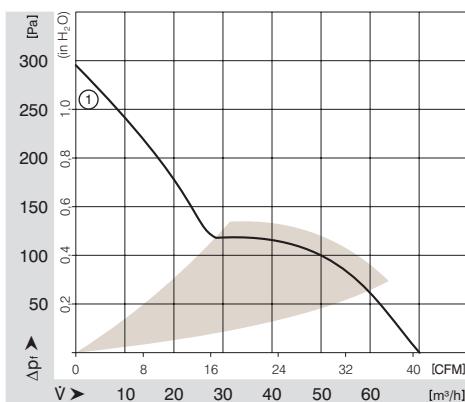

# DC Axial Fans

Series 600 J 60 x 60 x 32 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- Innovative impeller design with winglets.
- Compact design with high power density.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Compression-rigid curve and low noise factor.
- Fan of fibreglass reinforced plastic. PBT housing, PA impeller.
- Air exhaust over struts. Rotational direction CW looking at rotor.
- Electrical connection via 2 leads AWG 24, TR 64. Stripped and tinned ends.
- Mass 100 g.

# DC Axial Fans

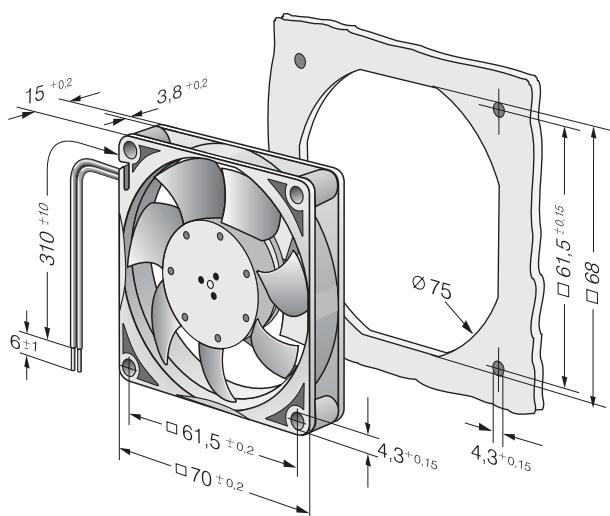

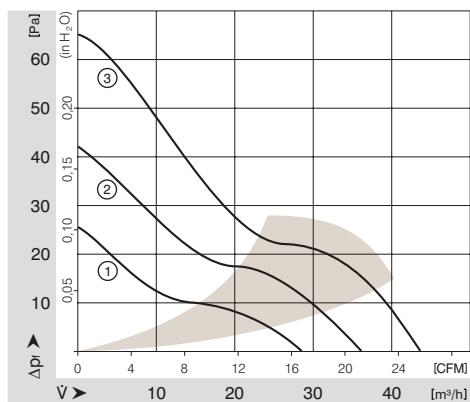

Series 700 F 70 x 70 x 15 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity. The fan only operates when the polarity is correct. Protected against locked rotor and overloading.
- Fan of fibreglass reinforced plastic. PBT housing, PA impeller.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Electrical connection via 2 leads AWG 28, TR 64. Stripped and tinned ends.
- Mass 53 g.

Rotor protrusion max. 0.4 mm

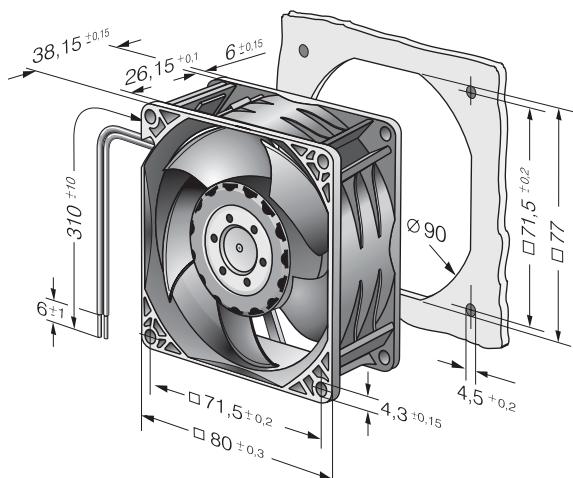

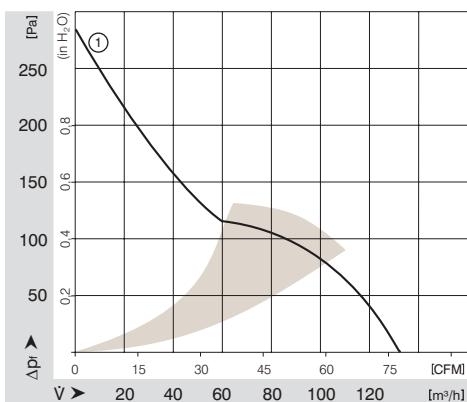

# DC Axial Fans

Series 8200 J 80 x 80 x 38 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- Innovative impeller design with winglets.
- Compact design with high power density.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Compression-rigid curve and low noise factor.
- Fan of fibreglass reinforced plastic, PBT housing, PA impeller.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 24, TR 64. Stripped and tinned ends.
- Mass 160 g.

# DC Axial Fans

Series 4300 N 119 x 119 x 32 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity, locked rotor and overloading; partially impedance protected.
- Fan of fibreglass reinforced plastic. PBTP housing, PA impeller.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Electrical connection via leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 230 g.

# DC Diagonal Fans

Series DV 4100 119 x 119 x 38 mm

- DC fans with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- Diagonal fan with compression-proof curve and low noise level.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Metal flange. Impeller of fibre-glass reinforced plastic PA.
- Housing of fibre-glass reinforced PBT. Metal housing optional.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass: Plastic housing 375 g, metall housing 455g.

# DC Axial Fans

Series 6400 TD TURBOFAN 172 x 150 x 51 mm

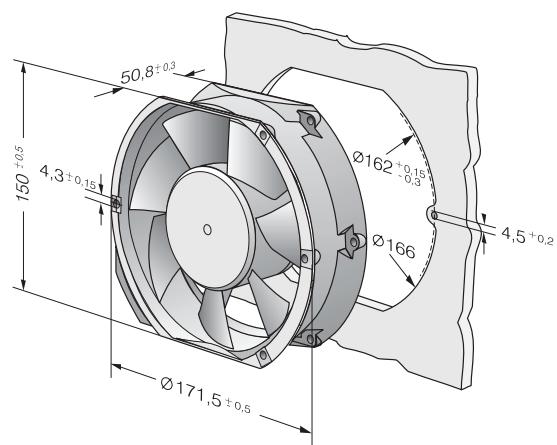

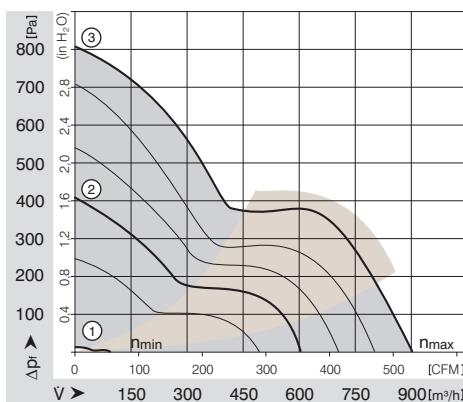

- DC electronic fan with 3 phase EC drive and fully integrated operating electronics.
- For load-dependent speed control with highly intelligent motor management and power and speed reserves which open up completely new areas of application.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Metal fan housing, impeller of fibre-glass reinforced plastic PA.
- Air exhaust over struts. CCW rotational direction looking at rotor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via leads. Housing with ground lug M4 for M4 x 8 screws. 48 V version incl. screws.
- Mass 760 g.

# DC Radial Fans

Series RLF 100 127 x 127 x 25 mm

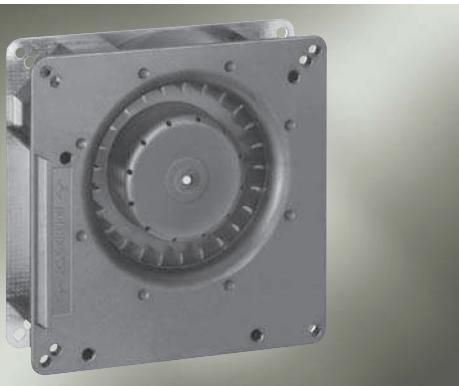

- DC radial blower with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- Extremely flat and powerful radial fan.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Housing and blower wheel of fibreglass reinforced plastic.
- Radial direction of flow, direction of motor as seen from right.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 320 g.

# DC Radial Fans

Series RG 90 N 135 x 135 x 38 mm

- DC radial blower with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- With electronic protection against reverse polarity, locked rotor and overloading via PTC-resistor; partially impedance protected.
- Spiral housing and blower wheel of fibreglass reinforced plastic.
- Housing base of galvanised steel plate.
- 48 V Type: flat pin 6.3 x 0.8 mm for grounding wire.
- Radial air exhaust through housing port.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 440 g.

Models RG 160-28/14 NTD... and RG 160-28/18 NTD... are available in customer-specific, custom-developed variants only. The data specified here are technically feasible benchmark values. The fans can be specially adapted to your application with signal outputs and control inputs.

For details of the technical possibilities, refer to the chapters on the sensor signal, alarm signal and control inputs.

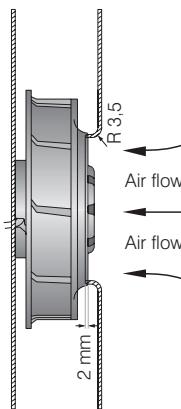

# DC Radial Fans

Series REF 100 100 Ø x 25 mm

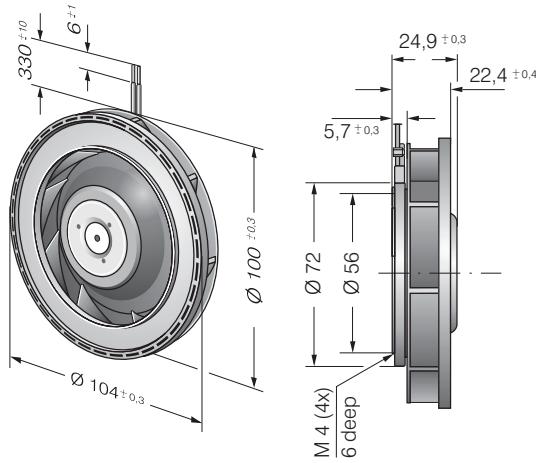

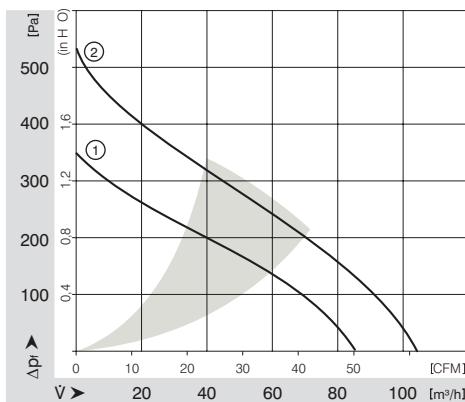

- DC radial blower with electronically commutated external rotor motor.
- Fully integrated commutation electronics.
- Extremely flat and powerful radial fan.
- With electronic protection against reverse polarity, locked rotor and overloading.
- Blower wheel of fibreglass reinforced plastic.
- Air exhaust radial. Rotational direction CCW looking at rotor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 2 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 160 g.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:  
Centrifugal fan mounted on a base plate 127 x 127 mm. Cover plate 127 x 127 mm with an air-inlet of Ø 70 mm, concentric to the blower wheel.

# DC Radial Fans

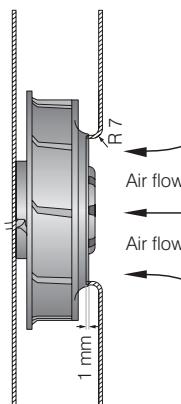

Series RER 101 101 Ø x 52 mm

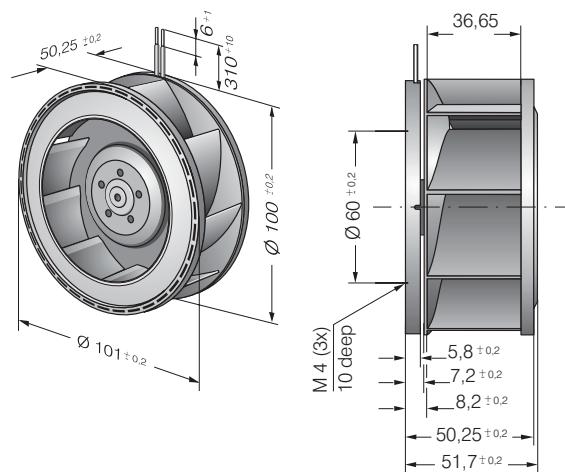

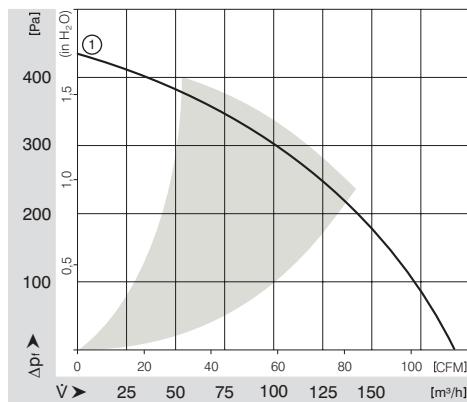

- DC radial blower with electronically commutated external rotor motor. With integrated programmable motor and drive electronics.
- Highly adaptable software configuration enables a tailor-made solution to the specific requirements of your application.
- With electronic protection against reverse polarity and locked rotor.
- Blower wheel of fibreglass reinforced plastic.
- Air exhaust radial. Rotational direction CW looking at rotor.
- Optional Vario-Pro: Highly adaptable software configuration of the fan enables a tailor-made solution to the specific requirements of your applications.
- Electrical connection via 4 leads AWG 22, TR 64. Stripped and tinned ends.
- Mass 305 g.

## Technical Information

### Cooling capacity and efficiency

Greater power density, increasing miniaturization and extreme electronic component density are posing increased demands on the cooling capacity and efficiency of fans. The intelligent and space-saving integration of the fan in the appliance configuration is therefore of major importance:

- Tailor-made cooling adapted to the situation as and when required.
- Programmable cooling by defining speed profiles.
- Transparency of function thanks to complete, interactive monitoring in all operating conditions.

ebm-papst provides intelligent cooling concepts which are optimally adapted to requirements. For example:

#### 1. Speed adaptation via NTC sensor

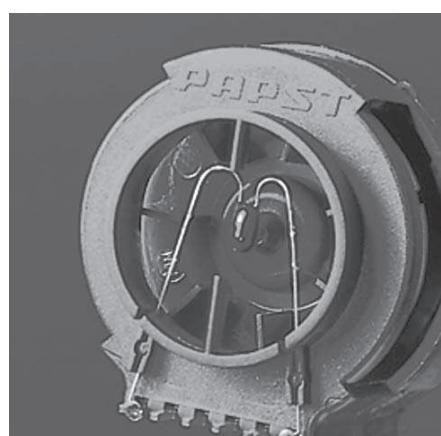

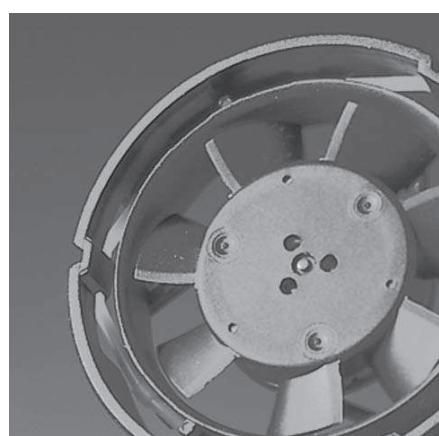

Standard fans in electronic cooling—millionfold tried and tested and nevertheless a temporary solution because standard fans have a distinct disadvantage: With constant speed and a corresponding high noise factor they continuously provide the airflow required in extreme cases. This extreme case only occurs, if it occurs at all, for a fraction of the service life. What is needed is the intelligent fan that automatically adapts to the current cooling requirements.

The ebmpapst answer: A complete range of DC fans with temperature-controlled speed adaptation - in all standard dimensions.

Installation is simple. The control electronics receive their thermal information for speed adaptation steplessly and loss-free via a temperature sensor either externally via a single lead, positioned as required, or internally directly in the fan hub in the airflow.

#### 2. DC fans with separate control input

Speed control is also possible with DC fans that have a separate control input. A variation in speed can thus be realized via a control voltage or a pulse-width modulated signal. These possibilities are used above all in devices that have appropriate standard interfaces and thus require a load-dependent variation of the fans.

Fans with TD motor  
Programmable fans  
Vario-Pro®  
Fans with sensor signal  
Fans with alarm signal

## Technical Information

### 3. Sensor signal

DC fans with sensor signal.

The integrated „electronic tacho“ continuously provides an actual speed signal for external evaluation. The user is informed at all times of the current fan speed via an extremely simple signal evaluation by the customer. The sensor signal is via a separate lead.

### 4. Alarm signal

For applications which require monitored fan operation with alarm signal, ebm-papst has numerous alarm signal versions, either a static, pre-processed or interface-compatible long-or short-term signal depending on the type of fan.

### 5. Turbo drives

Fans with three-phase EC drives and fully integrated operating electronics. These three-phase motors whose torque is virtually non-reliant on the rotor position are used for extremely high power. These motors can also be operated in both directions of rotation so that in special cases reverse operation of the fans can be realized.

### 6. Vario-Pro fans

This High-end fan concept by ebm-papst with programmed intelligence and customer-specific integrated functions makes your electronic cooling even more variable and competitive. Vario-Pro ensures fresh impetus as far as economy is concerned for all demanding cooling tasks – e.g. where reliability, more flexibility and intelligent function features such as alarm function, speed control etc. are required.

The successful concept of Vario-Pro is: Tailor-made software instead of a fixed hardware because programmed software modules for motor control and application intelligence are responsible for the work that analogue components were responsible for in the past. This central control unit of the Vario-Pro comprises of a microcontroller and an EEPROM, on which all characteristics are stored.

### 7. Protection against environmental influences

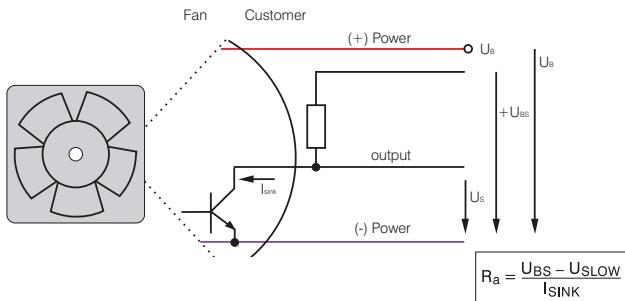

Some applications are demanding on the fans' resistance to ambient influences, such as dust, humidity, water and salt. ebm-papst offer solutions for adapting fans to various ambient conditions.

# Sensor signal /2 "tacho"

- Speed-proportional rectangular pulse for external speed monitoring of fan motor
- 2 pulses per revolution / 6 pulses per revolution with TURBOFANS.
- Open-Collector signal output
- Extremely wide operating voltage range (5 ... 60 V)
- Easy adaptation to user interface
- Connection via separate lead
- The sensor signal also serves as a major comparison variable for setting and maintaining the desired speed for interactive or controlled cooling with one or several interconnected fans.

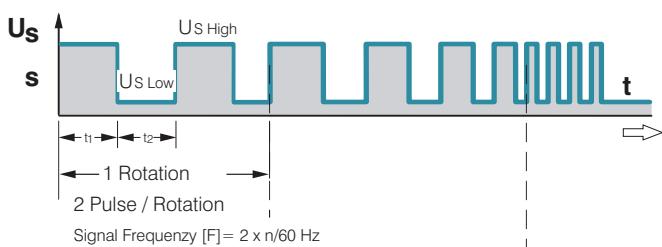

## Electrical connection

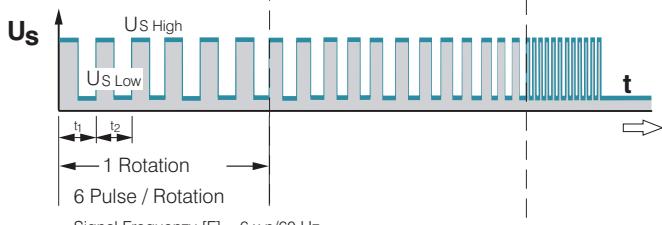

All voltages measured to ground.

External load resistance  $R_a$  /  $U_s$  /  $U_{BS}$  required.

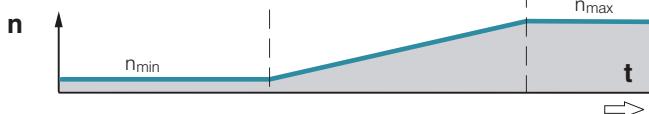

## Signal output voltage all models except TD-Fans

## only TD-Fans

## Fan speed

## Attention:

With these fan specials, deviations as regards temperature range, voltage range and power consumption are possible compared with standard fans.

## Electrical connection

All voltages measured to ground  
External load resistance  $R_a$  from  $U_a$  to  $U_{BA}$  required.

$t_2$  = Alarm signal suppression during start-up  
\*  $n < \text{Speed limit } n_G$  by braking or blocking

# Vario-Pro®

- "Software instead of hardware" – aptly describes the unique fan concept, equipped at the plant with tailor-made intelligence for cooling electronics.
- Flexible configuration using software, allows quicker availability, sampling from the factory and the ability to supply customer-specific solutions in any quantity.

## Vario-Pro-Features

### Externally Speed setting

- Speed Setting via temperature, PWM or analog control voltage.  
On Page 94 (Speed setting).
- Description of speed curve with up to 14 selectable interpolation points.  
Linear interpolation between the points.
- 0 rpm. possible.
- Recognition of sensor failure: In case of loss of sensor, the fan operates at programmable (fail-safe) speed.

### Alarm- and tacho functions

- Optional alarm/or tacho function
- Selectable alarm speed limit (with hysteresis) and alarm delay time
- Latching of alarm signal
- Delay only when starting or permanently active
- Output signal "High" or "Low" in case of alarm
- Optional alarm when temperature sensor fails.
- Optional alarm in case of excess temperature.

### Motor management

- High control accuracy due to digital motor management
- Higher operating efficiency due to optimum adaption of motor hardware and software.

# Speed setting

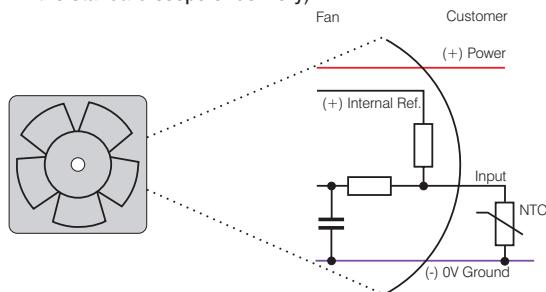

## with temperature

- ebm-papst fans can come equipped with optional fan speed control.
- Temperature, analog voltage or a PWM can serve as control variables.

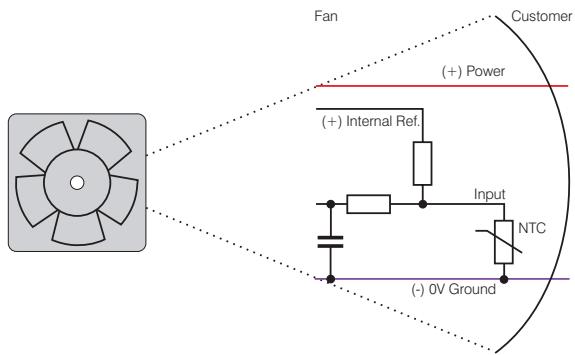

### External Temperature sensor Type T

- Ext. NTC type LZ370 is required (not included in the standard scope of delivery).

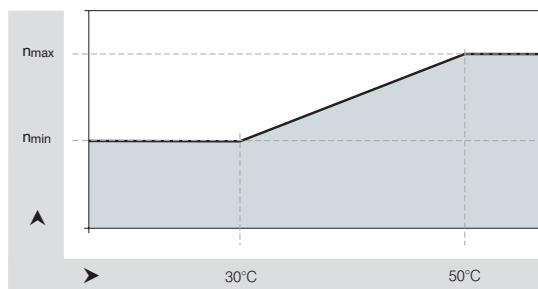

### Internal Temperature sensor Type I

- NTC integrated in fan hub.

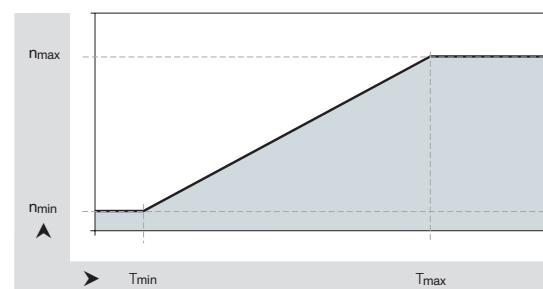

### Standard speed-temperature curve for type T and type I

$$n_{\min} \approx \frac{1}{2} n_{\max}$$
$$T_{\min} \approx 30^{\circ}\text{C}; T_{\max} = 50^{\circ}\text{C}$$

### Optionally available with user-selectable temperature-speed curve control

$$n_{\min} \approx 800 \text{ 1/min}$$
$$T_{\min} \approx 5^{\circ}\text{C}$$
$$n_{\max}$$
 model-dependent  
$$T_{\max} \leq 85^{\circ}\text{C}$$
, model-dependent

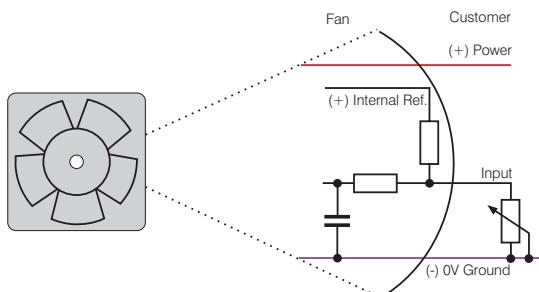

# Speed setting

## with control voltage or PWM

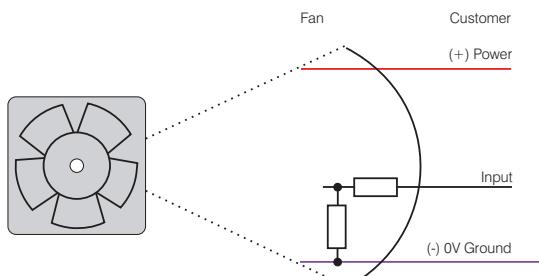

### Speed setting via control voltage Type A

- Standard control range 0 ... 5 V

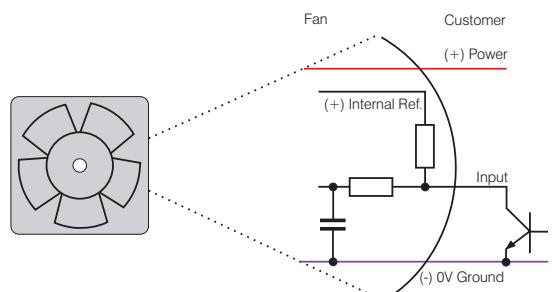

- Optional control range 0 ... 10 V

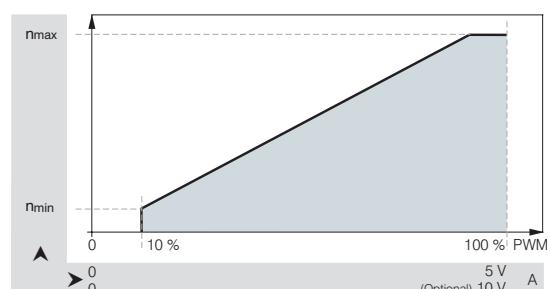

### Speed setting via PWM Type P

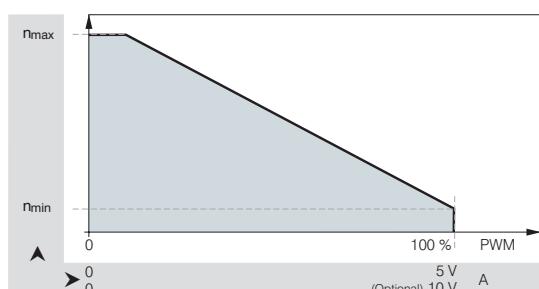

- Speed setting via PWM signal that is user generated as a controlled variable.
- PWM signal: 2 KHz (0–100 %)
- Open collector input

### Standard curve P / A

### Optional – selectable curve P / A

# Protected Fans

## against environmental influences

- Meeting special requirements for a broad range of applications.
- Resistant to environmental influences, such as dust, splash water, humidity, spray water and salt fog.
- Highly competent solutions for adapting fans to environmental conditions.

### Humidity protection

A coating on the motor and printed circuit board protects against humidity and condensation.

### IP 54 protection

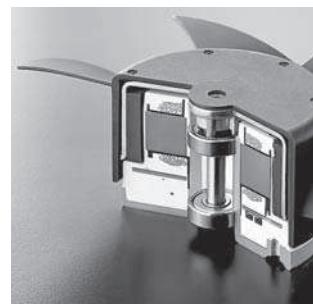

The motor and circuit board are coated to protect them against splash water and humidity. High protection classes up to IP 67 are available on request.

### Salt fog protection

Salt fog is extremely demanding on the resistance of the product. ebm-papst make use of technologies that protect fans and blowers from salt fog reliably and durably.

### Stainless steel bearings

Special bearings made of stainless steel provide additional protection.

The solutions that are available and in use can differ depending on size. We would be glad to develop solutions tailored for the demands of your application.

ACmaxx Axial Fans	100

## Technical Information

### Progress made by ebm-papst

The best example: The ACmaxx fans from ebm-papst, which, thanks to an ingenious yet simple improvement over conventional AC fans, provide substantial benefits.

The aim in developing the new ACmaxx series was to raise the technology standard of the conventional AC fan and, in the process, facilitate the transition to the new technology by retaining the overall mounting dimensions. In short, to ensure the fans can be replaced 1:1 without any peripheral changes or changes to the voltage situation.

The outstanding features of ACmaxx fans:

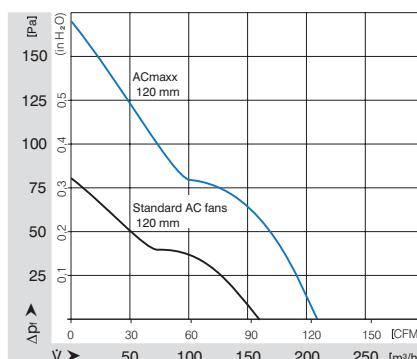

### 1. Designed for all AC voltages

The ACmaxx generation of fans is designed for direct connection to all AC voltages and frequencies with no switching required, handling from 85 to 265 V AC and frequencies of 50 to 60 Hertz.

Voltage fluctuations in the power system are automatically compensated for. Its universal power supply allows for great potential savings in reduced stockholding and logistics.

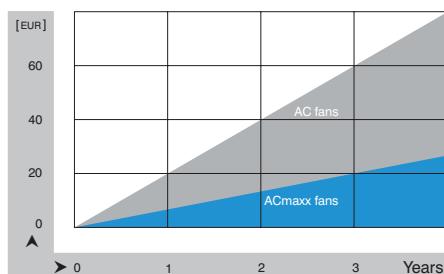

### 2. More power, more flexibility

In contrast to conventional AC technology, the modern drive concept of this fan series is not linked to a fixed power frequency. Hence the motor speed can be increased over a wide range. As such, ACmaxx provides significantly higher air flow and increased pressure.

### 3. Highest energy efficiency

The ACmaxx drive concept is based on state-of-the-art EC technology with outstanding motor efficiency. Compared to AC fans of the same size, ACmaxx energy consumption is up to 75% lower – for higher cooling capacity! The energy difference alone means that the ACmaxx pays for itself after a few months. The savings over the entire service life, especially in systems with multiple fans, is considerable.

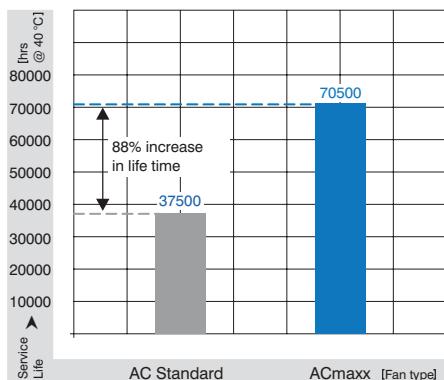

Energy cost comparison:  
Standard AC fan  
versus ACmaxx,  
at the same air performance.

### 4. Long service life

The ACmaxx motor efficiency is up to 75% greater than that of conventional AC fan variants. This not only saves energy, it also means less intrinsic heating in the motor. The reduced heating has a direct, positive effect on the bearing system, which is why ACmaxx fans have a service life that is up to 85% longer than conventional AC fans!

This also lengthens the service and maintenance intervals significantly. The expense of replacement fans, and even more expensive downtimes, are kept to a minimum.

### 5. Flexible and failsafe

The flexibility of ACmaxx is one-of-a-kind. With its intelligent features, ACmaxx can be individually adapted to the specific application: standby mode, overload mode at peak times or night reduction all the way to temperature-controlled quiet operation are all possible. From speed setting to alarm or speed signal outputs, ACmaxx offers optional interfaces with which you can quickly and easily implement operation monitoring.

You can find further information about these fan options in the "Specialized fans" chapter, starting on page 82. Or you can simply contact our application engineers to discuss your ideal ACmaxx fan.

### 6. Security

- Safety UL and CSA.  
VDE 0805 / EN60950 approvals applied for.  
VDE 0700 / EN60335 on request.
- Our fans have the CE mark of conformity
- EMV protection
  - > EN61000-4-4 Level 1 (1 kV)B
  - > EN61000-4-2 Level 8 kV/15 kV
  - > EN61000-4-3
  - > EN61000-4-6
  - > EN61000-4-8
  - > EN55022 Class B

### 7. Environment

- Optional: improved humidity protection or Protection Class IP 54

# ACmaxx Axial Fans

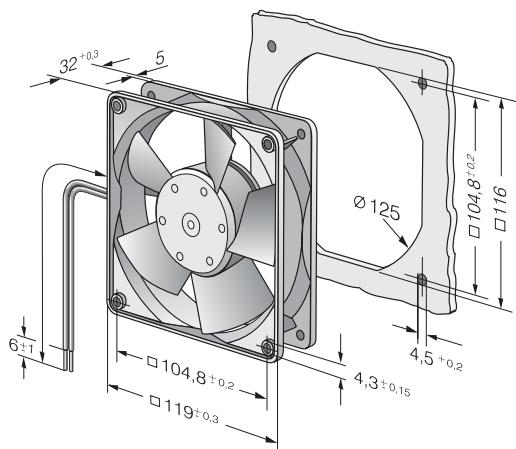

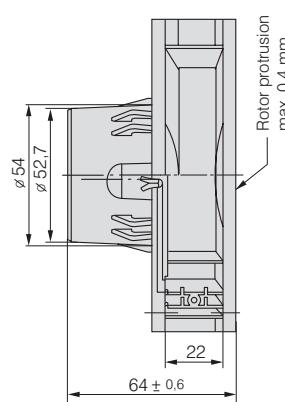

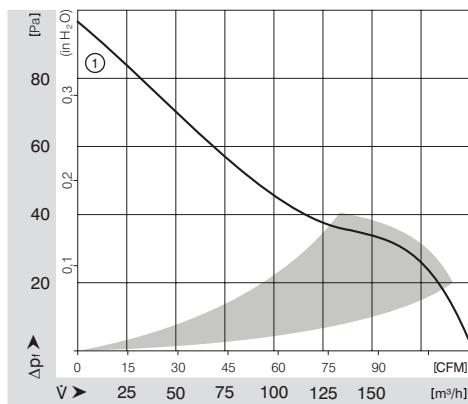

Series AC 4300 119 x 119 x 32 mm

- Fans with electronically commutated external rotor motor for connection to AC voltage.
- With electronic protection against locked rotor and overloading.
- Fan of fibreglass reinforced plastic. PBTP housing, PA impeller.
- Air exhaust over struts. Rotational direction CW looking at rotor.
- Electrical connection via leads AWG 22. Stripped and tinned ends.
- Open-loop speed control, sensor and alarm signals, and protection against environmental influences are available upon request.
- Masse 325 g.

# ACmaxx Axial Fans

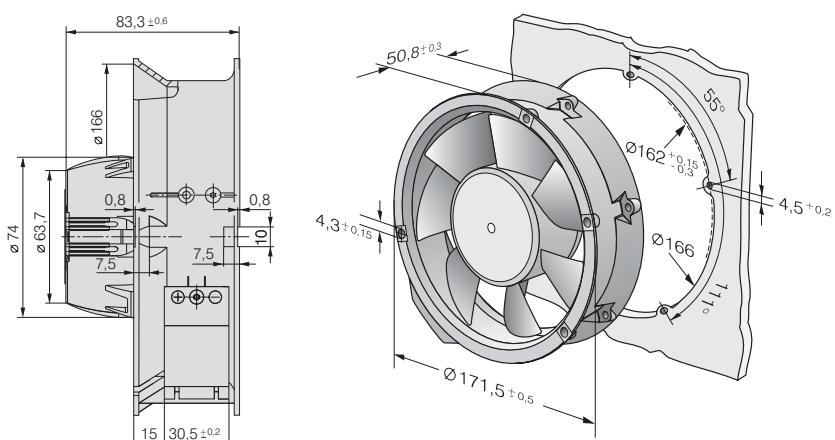

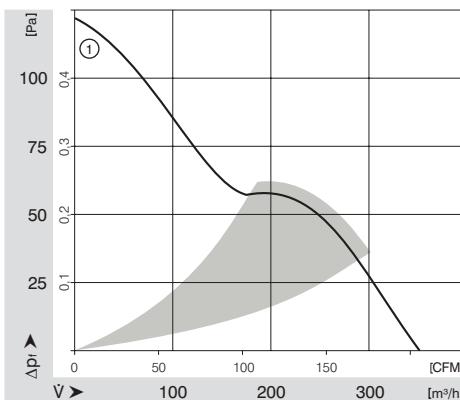

Series AC 6200 N 172 ø x 51 mm

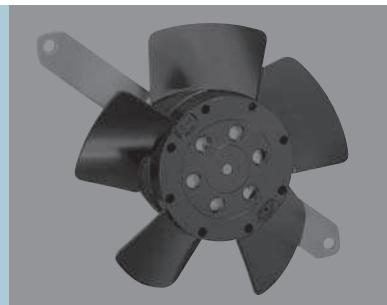

- Fans with electronically commutated external rotor motor.
- With electronic protection against locked rotor and overloading; electronic motor current limitation in the startup phase and when rotor is blocked.
- Metal fan housing, impeller of fibreglass reinforced plastic PA.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Electrical connection via leads AWG 22. Housing with ground lug M4 x 8 (TORX). 48 V DC with screws.
- Open-loop speed control, sensor and alarm signals, and protection against environmental influences are available upon request.
- Mass 900 g.

AC Fans Overview	105
AC Axial Fans	106
AC Radial Fans	126

## Technical Informations

### Program

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development activity, millions of units in series production and competence in innovation of a world-wide technological leader.

A wide range of fans for AC operation are presented in this catalogue. In addition to complete equipment fans, you will also find fans without external housing, providing a particularly economical advantage when the air duct can be integrated in the respective appliance.

### Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings. For extreme ambient conditions: Fans with ball bearings. With pin connection or free-hanging leads.

### Shaded-pole or capacitor motors

Fan drive by shaded-pole or capacitor motors most of which incorporate the world-famous ebm-papst external rotor principle: The fan blades are directly attached to the external rotor of the external rotor motor thus combining both high performance and profitability.

### Flat built AC fans

ebm-papst also has particularly flat built AC fans with internal rotor motor. Their advantage being, quick start to full speed. A plastic impeller and the both smaller and lighter internal rotor motor lead to a lower moment of inertia.

### Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E or F insulated motors.

### Protection class

All ebm-papst fans conform to the requirements of IP 20. Fans conforming to IP 54 and special types of protection class are also available.

### AC voltage

The line of AC fans for Euro voltage according to IEC 38 (230 V + 6 %, -10 %) is basically also available for 115 V.

### Frequencies

AC fans can be operated at frequencies of 50 Hz or 60 Hz. However, their technical data then change accordingly.

### Capacitor

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required phase-shift capacitor is already integrated in the fan housing.

### Overloading

Almost all AC fans are protected against overloading (e.g. due to blocked rotor) the drive motors are either impedance protected (marked "Impedance protected", and/or "Z.P.") or are equipped with a thermal switch (marked "Thermally protected" or "Th.P."). The model designation of these fans ends with "S".

# AC Axial Fans

Series 8000 A 80 x 80 x 38 mm

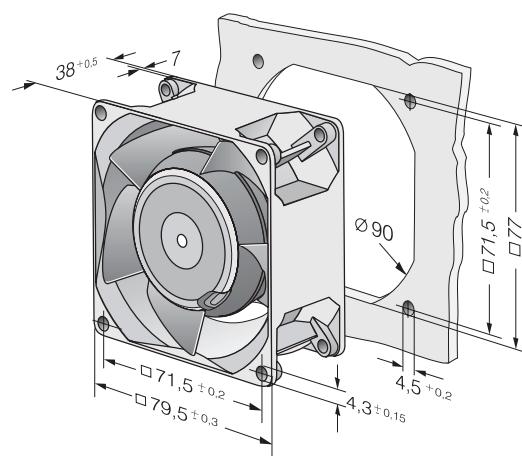

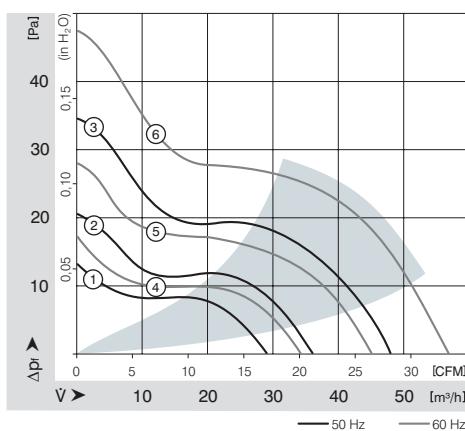

- AC fans with external rotor shaded-pole motor. Impedance protected against overloading.
- Metal fan housing and impeller.
- Air intake over struts. Rotational direction CW looking at rotor.
- Electrical connection via 2 flat pins 2.8 x 0.5 mm.
- Fan housing with ground lug and screw M4 x 8 (TORX).
- Mass 490 g.
- Also available with electrical connection via leads.
- Also available with air-exhaust over struts and of rotation cw.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 76.5 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 8000 A is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

The air flow and noise level of fans without external housing depends on the installation conditions. The stated air flow and noise has been measured with an orifice 109 mm Ø at a distance of approx. 17 mm from the mounting bracket. Under exceptionally favourable mounting conditions, the air flow of fan series 4600 N is achievable. The noise in the optimal operating range can only be measured for these fans in a specific application.

# AC Axial Fans

Series 5900 127 x 127 x 38 mm

- AC fans with internal rotor shaded-pole motor. Impedance protected against overloading.
- Metal fan housing and impeller of fibreglass reinforced plastic PA.
- Air exhaust over struts. Rotational direction CCW looking at rotor.
- Electrical connection via 2 flat pins 2.8 x 0.8 mm.
- Fan housing with ground lug and screw M4 x 6.
- Mass 570 g.

The air flow and noise level of fans without external housing depend on the installation conditions. The stated air flow and noise levels have been measured under the following conditions:  
Centrifugal fan mounted on a base plate 260 x 260 mm. Cover plate 260 x 260 mm with an air-inlet of Ø 100 mm, concentric to the blower wheel.

# Accessories

Finger Guards	134
Filter Guards grille	139
Accessories	140

Everything that you need for your fan. ebm-papst provides an extensive range of accessories for optimum fan operation: From temperature sensing for speed-controlled fans to finger guards of all types, switched-mode power supply, connecting cable, filter, screens, spacers and assembly parts. In addition to the accessories and assembly parts listed in this catalogue, ebm-papst also supplies numerous special parts for fan operation. The sales experts at ebm-papst will be happy to assist you in your enquiries concerning fan assembly and application.

From selection to accessories:  
Insist on the efficient and reliable  
service provided by  
ebm-papst.

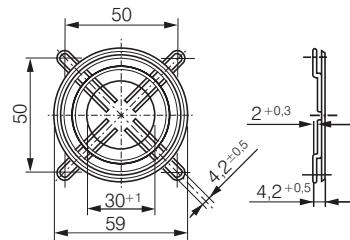

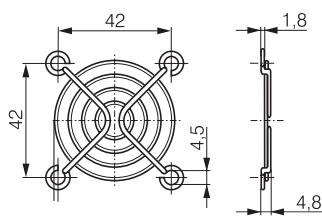

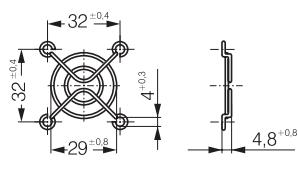

# Finger Guards

**LZ32P** Fan size 80 x 80

**LZ30P** Fan size 119 x 119

# Fan Filter Guards

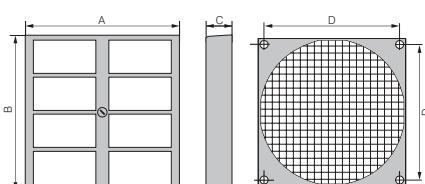

- Fan filter guards for installation on axial fan series for sizes 60 mm, 80 mm, 92 mm, 119 mm, 172 mm. All filter units fit directly onto the existing installation holes on the fans.
- Fan filter guards consist of 3 parts: the outer grille, the inner fastening plate and the replaceable filter mat.
- Grille is molded of polycarbonate (PC) with a matt surface.
- A quick-release on the grille allows for quick and easy filter mat replacement.
- Wire-mesh fastening plate, black powder coating.
- Filter mat replacement can be performed on running fans, welded wire-mesh protection.
- Filter mat made of white, synthetically bonded fibers.

Protection Filter	Fan size	A	B	C	D
FF60	60 x 60 mm	65	65	13.5	50.0
FF80	80 x 80 mm	85	85	14.0	71.5
FF92	92 x 92 mm	125	105	17.5	82.5
FF119	119 x 119 mm	162	136	18.5	104.8
FF172	Ø 172 mm	226	190	19.5	162.0

Replacement filter mats on request.

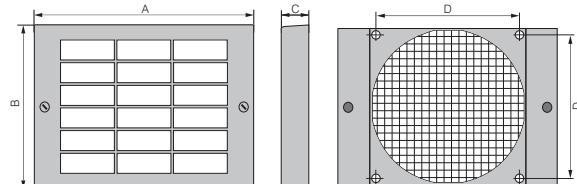

## FF60 / FF80

Fan size: 60 x 60 mm  
80 x 80 mm

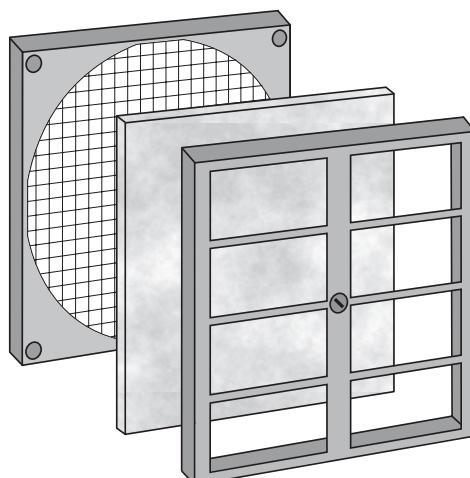

## FF92 / FF 119 / FF 172

Fan size: 92 x 92 mm  
119 x 119 mm  
Ø 172 mm

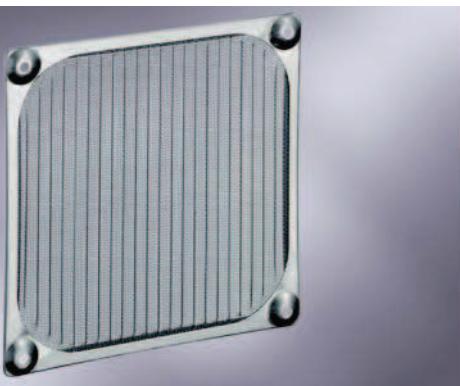

### Filter capacity

A fan filter guard filters out up to 75% of dust particles up to a size of 5-10 microns and withstands temperatures of up to 100°C. Flame retardant in accordance with BS2963. For installed, clean filters, an air flow reduction of 20 – 30% can be assumed.

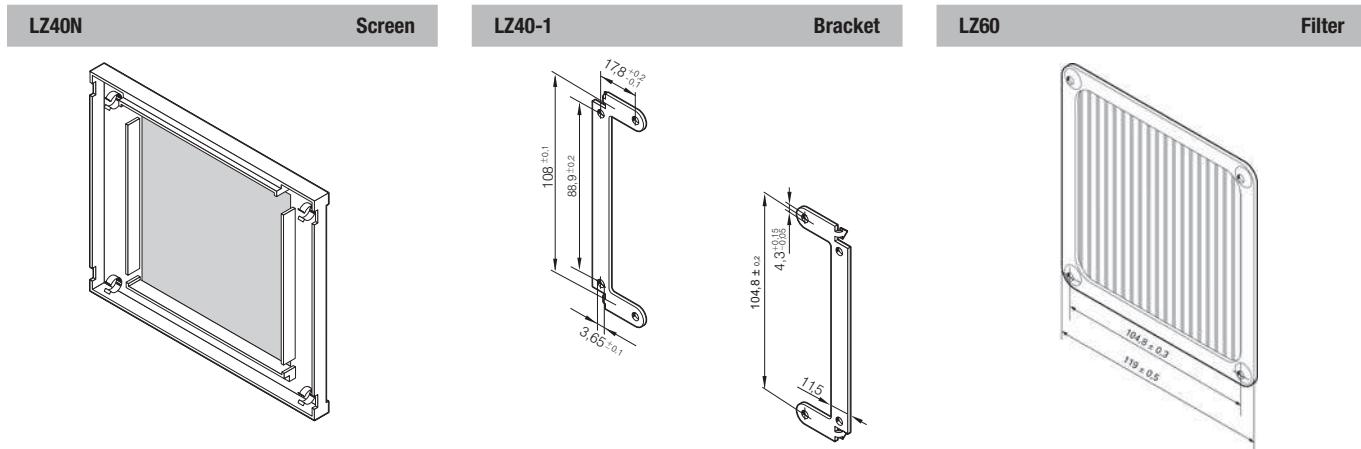

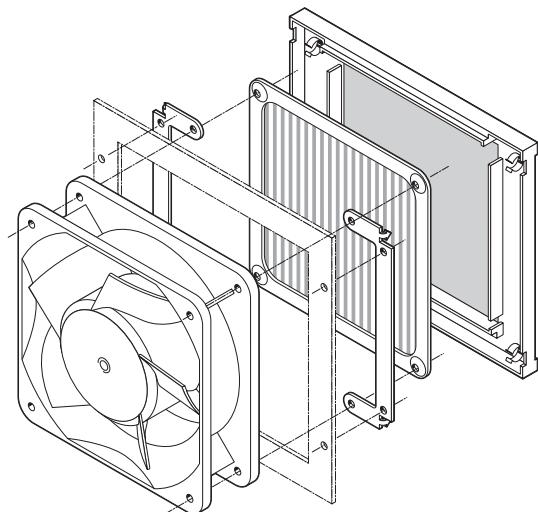

# Accessories

In addition to the accessories and assembly parts listed in this catalogue, ebm-papst also supplies numerous special parts for fan operation. The sales experts at ebm-papst will be happy to assist you in your enquiries concerning fan assembly and application.

LZ120

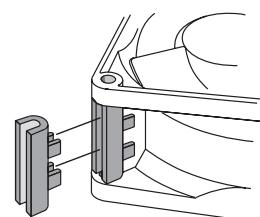

Cable connection with injection molded plug (PVC, black). Strands with core-end sleeves in accordance with DIN 46228. For all fan types with flat plugs of 2.8 / 3.0 x 0.5 mm.

LZ12

Screw clip of stainless steel. For mounting fans with threaded pin 3.5 DIN 7970.

LZ260/LZ261

Spacer of fibreglass reinforced plastic. For screw mounting over both fan mounting flanges.

LZ210

Screw clip of hardened steel. For mounting fans with threaded pin 6-32 UNC and/or 3.5 DIN 7970.

LZ370

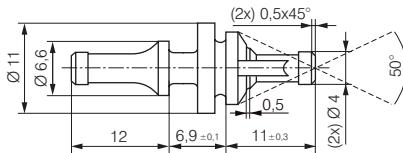

Required performance data:

$$\begin{aligned} R_{25} &= 100 \text{ K}\Omega \pm 5\% @ 25^\circ\text{C} \\ \text{B-value} &= 4190 \pm 2\% \\ P_{\max} &= 0.25 \text{ W} \end{aligned}$$

Temperature sensor for speed-controlled fan operation. Temperature range 30...50 °C.

LZ550

Rubber anti vibration mounts for fans with a hole  $\varnothing$  of  $4.3 \pm 0.2$  mm and flange thickness of 3 - 5.5 mm. For a carrier plate with a hole  $\varnothing$  of  $6.5 \pm 0.15$  mm and plate thickness of 1 - 2 mm.
