

JetStream T1600 Series Smart Switches Datasheet

MODELS: T1600G-28TS (TL-SG2424)/T1600G-28PS (TL-SG2424P) T1600G-52TS (TL-SG2452)/T1600G-52PS (TL-SG2452P)

Highlights

- -Gigabit Ethernet connections on all ports provide full speed of data transferring
- -L2+ Feature——Static Routing, helps route internal traffic for more efficient use of network resources
- -Advanced security features include IP-MAC-Port Binding, ACL, Port Security, DoS Defend, Storm Control, DHCP Snooping, 802.1X, and Radius Authentication
- -L2/L3/L4 QoS and IGMP snooping optimize voice and video applications
- -Comprehensive IPv6 support for management, QoS and ACL
- -Web/CLI managed modes, SNMP, RMON and Dual Image bring abundant management features
- -Dual Firmware Image improves reliability and up-time of your network

Overview

TP-Link's new JetStream T1600 series gigabit smart switches feature significant upgrades, when compared with previous models. Integrated with useful L2 and L2+ features such as static routing, 802.1Q VLAN, QoS, IGMP Snooping, they provide cost-effective networking solutions for small and medium-sized businesses, offering enhanced usability and better performance.

Abundant L2 and L2+ Features

For more application of L2 switches, T1600 series switches supports a complete lineup of L2 features, including 802.1Q tag VLAN, Port Isolation, Port Mirroring, STP/RSTP/MSTP, Link Aggregation Group and 802.3x Flow Control function. Besides, the switch provides advanced features for network maintenance such as Loop Back Detection, Cable Diagnostics and IGMP Snooping. IGMP snooping ensures the switch intelligently forward the multicast stream only to the appropriate subscribers while IGMP throttling & filtering restrict each subscriber on a port level to prevent unauthorized multicast access. Moreover, these switches support L2+ feature—static routing, which is a simple way to provide segmentation of the network with internal routing through the switch and helps network traffic for more efficient use.

Advanced QoS Features

To integrate voice, data and video service on one network, the switch applies rich QoS policies. Administrator can designate the priority of the traffic based on a variety of means including Port Priority, 802.1P Priority and DSCP Priority, to ensure that voice and video are always clear, smooth and jitter free. In conjunction with the Voice VLAN the switch supports, the voice applications will operate with much smoother performance.

IPv6 Support

T1600 series switches support comprehensive IPv6 features including management, ACL and QoS, all helps to ensure investment protection and a smooth migration to IPv6-based network without switch replacement.

Enterprise Level Management Features

The switches are easy to use and manage. It supports various user-friendly standard management features, such as intuitive web-based Graphical User Interface (GUI) or industry-standard Command Line Interface (CLI), SNMP (v1/2/3) and RMON support enables the switch to be polled for valuable status information and send traps on abnormal events. And it also supports Dual Image, which provides reduced down-time for the switches, when the image is being upgraded / downgraded.
